Limited Warranty

IMPORTANT—PLEASE READ THIS LIMITED WARRANTY CAREFULLY TO UNDERSTAND YOUR RIGHTS AND OBLIGATIONS! The term “Hardware Device” means the Bridge Systems hardware product. The term “You” means either an individual or a single legal entity who will be referred to in this Limited Warranty as “You” and “Your”.

A. WARRANTIES.

1. **Express Warranty.** Subject to the terms and conditions of this Limited Warranty and in lieu of any other (if any) express warranties, Bridge Systems warrants that under normal use and service, on the date of acquisition as shown on Your receipt or similar proof of payment and for the period of time stated below for the applicable Hardware Device (hereafter each defined as the “Warranty Period”), that the Hardware Device will substantially conform with the accompanying Bridge Systems packaging and documentation. As to any defects discovered after the Warranty Period, there is no warranty or condition of any kind.

Warranty Period:

For all hardware parts of the Bridgemate Pro scoring system: one (1) year.

This Limited Warranty does not cover, and no warranty of any kind is provided with respect to any subjective or aesthetic aspects of the Hardware Device. The express warranty stated above is the only express warranty made to You and is provided in lieu of all other express or implied warranties and conditions (except for any nondisclaimable implied warranties that exist), including any created by any other documentation or packaging. No information or suggestions (oral or in a record) given by Bridge Systems, its distributors, agents, affiliates or suppliers or its or their employees or agents, shall create a warranty or condition or expand the scope of this Limited Warranty.

2. **Limitation on Duration of Implied Warranties.** If You are a consumer, You may also have an implied warranty and/or condition under the laws of some jurisdictions, which is hereby limited to the duration of the Warranty Period. Some jurisdictions do not allow limitations on how long an implied warranty or condition lasts, so the foregoing limitation may not apply to You.

B. **EXCLUSIVE REMEDY.** Subject to applicable law and the following, and provided that You return the Hardware Device to Your place of acquisition (or, if that place will not accept the return, to Bridge Systems) with a copy of Your receipt or other bona fide proof of payment during the Warranty Period, Bridge Systems will, at its option and as Your exclusive remedy for breach of this Limited Warranty and any implied warranties: repair or replace the defective Hardware Device; or make payment to You for the allowable damages that You incurred in reasonable reliance, but only up to the amount You paid (if any) for the Hardware Device less reasonable depreciation based on actual use.

The above remedy is subject to the following:

Any repaired or replaced Hardware Device will be new or refurbished or serviceably used, comparable in function and performance to the original Hardware Device, and may include third party items;

Any Hardware Device repaired or replaced under this Limited Warranty will be warranted for the remainder of the original Warranty Period or 30 days from the date of shipment of the item back to You, whichever is longer.

Except as otherwise required by legislation in Your jurisdiction, costs associated with transport (including packaging) for warranty service shall be at Your expense; and Bridge Systems, its distributors, agents, affiliates and suppliers do not provide any warranties regarding any other services provided under this Limited Warranty and disclaim all duties (if any) of workmanlike effort or of lack of negligence regarding such services.

C. **NO OTHER WARRANTIES.** The express warranty stated above is the only express warranty made to You and is provided in lieu of all other express or implied warranties and conditions (if any) including any created by any other documentation or packaging. No other warranties or conditions are made with respect to the Hardware Device or the warranty services by any person, including but not limited to Bridge Systems, its distributors, agents, affiliates and suppliers. No information (oral or written) or suggestions given by Bridge Systems, its distributors, agents or suppliers or its or their employees, shall create a warranty or condition or expand the scope of this Limited Warranty.

Also, there is no warranty or condition of title, quiet enjoyment, or noninfringement in the Hardware Device. You may have greater rights existing under legislation in Your jurisdiction.

D. EXCLUSION OF OTHER DAMAGES.

TO THE FULL EXTENT ALLOWED BY LAW, BRIDGE SYSTEMS AND ITS DISTRIBUTORS, AGENTS, AFFILIATES AND SUPPLIERS ARE NOT LIABLE FOR ANY:

(i) CONSEQUENTIAL OR INCIDENTAL DAMAGES;

(ii) DAMAGES OR LOSS OF ANY NATURE WHATSOEVER RELATING TO LOST PROFITS, BUSINESS INTERRUPTION, LOSS OF DATA OR PRIVACY OR CONFIDENTIALITY, ANY INABILITY TO USE ALL OR PART OF THE HARDWARE DEVICE, PERSONAL INJURY, OR ANY FAILURE TO MEET ANY DUTY (INCLUDING BUT NOT LIMITED TO ANY DUTY OF NEGLIGENCE, GOOD FAITH OR OF WORKMANLIKE EFFORT); OR

(iii) INDIRECT, SPECIAL, OR PUNITIVE DAMAGES ARISING OUT OF OR RELATING IN ANY WAY TO THE HARDWARE DEVICE. THE FOREGOING APPLIES EVEN IF BRIDGE SYSTEMS OR ANY DISTRIBUTOR, AGENT, AFFILIATE OR SUPPLIER HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH LOSSES OR DAMAGES; AND EVEN IN THE EVENT OF FAULT, TORT (INCLUDING NEGLIGENCE), STRICT OR PRODUCT LIABILITY, MISREPRESENTATION OR OTHER REASON.

Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusions may not apply to You.

E. EXCLUSIONS FROM COVERAGE. This Limited Warranty shall not apply and Bridge Systems, its distributors, agents, affiliates and suppliers have no liability under this Limited Warranty if the Hardware Device:

- is used for commercial purposes (including rental or lease);
- is modified or tampered with;
- is damaged by Acts of God, power surge, misuse, abuse, negligence, accident, wear and tear, mishandling, misapplication, or other causes unrelated to defects in the Hardware Device;
- is damaged by programs, data, viruses, or files, or during shipments;
- is not used in accordance with the accompanying documentation and use instructions; or
- is repaired, modified or altered by other than a Bridge Systems authorized repair center and the unauthorized center causes or contributes to any defect or damage.

F. REGISTRATION. You need not register Your acquisition of the Hardware Device for the Limited Warranty to be effective.

G. BENEFICIARY. To the extent allowed by applicable law, the Limited Warranty is only made to You, the first purchaser of the Hardware Device, and there are no third party beneficiaries of the Limited Warranty. It is not intended for and does not apply to anyone else (except as required by law), including anyone to whom You make any transfer of the Hardware Device.

H. FURTHER INFORMATION. Bridge Systems is the warrantor under this Limited Warranty. To receive instructions for obtaining performance of this Limited Warranty You must either contact the local Bridgemate distributor serving Your country, or write to: Bridge Systems BV, Postal Box 21570, Rotterdam, 3001 AN, The Netherlands, or visit Bridge Systems on the World Wide Web at <http://www.bridgemate.com>.

You must also:

1. Submit proof of payment in the form of a bona fide, dated receipt, or invoice (or a copy) evidencing that You are the beneficiary of this Limited Warranty and that Your request for a remedy is made within the Warranty Period;
2. Follow Bridge Systems' shipping and other instructions if it determines that all or part of Your Hardware Device requires return. To obtain the Limited Warranty performance, You must take or deliver the item in either its original packaging or packaging that provides an equal degree of protection to the location specified by Bridge Systems. Except as otherwise required by legislation in Your jurisdiction, costs associated with transport (including packaging) for warranty service shall be at Your expense. Failure to follow the above instructions may result in delays, cause You to incur additional charges, or may void Your warranty.

This Limited Warranty gives You specific legal rights and You may also have other rights which vary from jurisdiction to jurisdiction. Where any term of this Limited Warranty is prohibited by such laws, it shall be null and void, but the remainder of the Limited Warranty shall remain in full force and effect if its allocation of risks is not materially disturbed.

Safety Instructions

Important safety warning

Failure to properly set up, use, and care for the Bridgemate Pro system can increase the risk of serious injury or death, or damage to the system. Read this manual and the manuals of any peripherals for important safety and health information. Keep all manuals for future reference. For replacement manuals, go to www.bridgemate.us/user_guides.php or contact your local Bridgemate supplier.

Select a safe location for the Bridgemate server and scoring devices

If the Bridgemate Pro server or Bridgemate Pro scoring devices falls and hits someone, it could cause serious injury. To reduce the risk of such injuries and damage to parts of the system, set them up according to these instructions and place them on a surface that:

- Is flat and level.
- Is stable and not likely to tip over.
- Allows all four feet of both the server and scoring device to be in contact with the surface.
- Is not likely to allow the server and scoring device to slip or slide off.
- Is clean and free of dust and debris.

If the surface or feet of server or scoring devices become dirty or dusty, clean them with a dry cloth.

Arrange all cables and cords so that people and pets are not likely to trip over or accidentally pull on them as they move around or walk through the area. When the Bridgemate Pro server is not in use, you may need to disconnect all cables and cords from the server to keep them out of the reach of children and pets. Do not allow children to play with cables and cords.

Do not place any part of the Bridgemate Pro system on a bed, sofa, or other soft surface. Do not place any part near heat sources, such as radiators, heat registers, stoves, or amplifiers.

Avoid smoke and dust

Do not use the Bridgemate Pro system in smoky or dusty locations. Smoke and dust may damage the Bridgemate Pro server and scoring devices.

Connect the Bridgemate Pro server to power

WARNING As with many other electrical devices, failure to take the following precautions can result in serious injury or death from electric shock or fire or damage to the Bridgemate Pro system.

Select an appropriate power source for your Bridgemate Pro server:

- Use only the power adapter that came with the Bridgemate Pro server or that you received from your Bridgemate supplier. If you are not sure if you have the correct power adapter, stop using it and contact your Bridgemate supplier. If you need a replacement power adapter, contact your Bridgemate supplier as well.
- Confirm that your electrical outlet provides the type of power indicated on the power adapter (in terms of voltage [V] and frequency [Hz]).
- Do not use non-standard power sources, such as generators or inverters, even if the voltage and frequency appear acceptable. Only use AC power provided by a standard wall outlet.
- Do not overload your wall outlet, extension cord, power strip, or other electrical receptacle. Confirm that they are rated to handle the total current (in amps [A]) indicated on the power adapter and any other devices that are on the same circuit.

To avoid damaging the power cord and power supply:

- Do not wrap the power cord around the power adapter.
- Protect the power cord from being walked on.
- Protect cords from being pinched or sharply bent, particularly where they connect to the power outlet, the power adapter, and the Bridgemate Pro server.
- Do not jerk, knot, sharply bend, or otherwise abuse the power cord.
- Do not expose the power cord to sources of heat.

- Keep children and pets away from the power cord. Do not allow them to bite or chew on it.
- When disconnecting the power cord, pull on the plug—do not pull on the cord.
- Do not let the power supply hang from the power cord.

If a power cord or power supply becomes damaged in any way, stop using it immediately and contact your Bridgemate supplier. Only use the power supply and AC power cords supplied with your Bridgemate Pro system or received from your Bridgemate supplier.

Unplug the Bridgemate Pro server during lightning storms or when unused for long periods of time.

Always connect the power cord according to the following instructions:

1. Fully insert the power supply cord into the Bridgemate Pro server.
2. Plug the power adapter into the wall outlet.

Insert batteries into the Bridgemate Pro scoring devices or server

WARNING Improper use of batteries may result in battery fluid leakage, overheating, or explosion. Released battery fluid is corrosive and may be toxic. It can cause skin and eye burns, and is harmful if swallowed. To reduce the risk of injury:

- Keep batteries out of reach of children.
- Do not heat, open, puncture, mutilate, or dispose of batteries in fire.
- Do not mix new and old batteries or batteries of different types (e.g., carbon-zinc and alkaline batteries)
- Remove the batteries if they are worn out or before storing your Bridgemate Pro system for an extended period of time. When removing batteries from the Bridgemate or server do not use your fingers or finger nails to remove the batteries; use a blunt object like a screwdriver or pen to safely remove the batteries.
- If a battery leaks, remove all batteries, taking care to keep the leaked fluid from touching your skin or clothes. If fluid from the battery comes into contact with skin or clothes, flush skin with water immediately. Before inserting new batteries, thoroughly clean the battery compartment with a damp paper towel, or follow the battery manufacturer's recommendations for cleanup.
- Dispose of batteries in accordance with Local and National Disposal Regulations, including those governing the recovery and recycling of waste electrical and electronic equipment (WEEE).

Remove batteries aboard aircraft

Before boarding any aircraft or packing the Bridgemate Pro scoring devices or server in luggage that will be checked, remove all batteries. The Bridgemate Pro server and scoring devices can transmit radio frequency (RF) energy, much like a cellular telephone, whenever batteries are installed.

Do Not Attempt Repairs

Do not attempt to take apart, service, or modify the Bridgemate Pro server, Bridgemate Pro scoring devices, power supply, or its peripherals in any way. Doing so could present the risk of serious injury or death from electric shock or fire, and it will void your warranty.

Any evidence of any attempt to open and/or modify the Bridgemate Pro system, including any peeling, puncturing, or removal of any of the labels, will void the Limited Warranty and render the Bridgemate Pro system ineligible for authorized repair.

Disposal of Waste Electrical and Electronic Equipment in the European Union and other countries/regions with separate collections systems

This symbol on the product or its packaging means that this product must not be disposed of with household waste. Instead, it is your responsibility to hand this over to an applicable collection point for the recycling of electrical and electronic equipment. This separate collection and recycling will help to conserve natural resources and prevent potential negative consequences for human health and the environment, which inappropriate disposal could cause due to the possible presence of hazardous substances in electrical and electronic equipment. For more information about where to drop off electrical and electronic waste, contact your local city/municipality office, your household waste disposal service, or the shop where you purchased this product.

Introduction

Thank you for purchasing your Bridgemate® Pro scoring system. Bridgemate Pro is an advanced electronic scoring system for bridge clubs and tournaments, designed to enhance the enjoyment of bridge. Bridgemate Pro automatically registers board results. The data are verified and fed to the central PC. Tournament directors will value the user-friendly features of Bridgemate Pro, as it enables them to focus fully on their core tasks.

This manual describes the operation of the Bridgemate Pro scoring system, including the central software program, the server and the Bridgemate Pro scoring devices. This manual serves as an addition to the manual supplied with your scoring program. As the Bridgemate Pro scoring system operates independently from the scoring program, this manual does not include instructions for operating your scoring program.

This manual consists of the following chapters:

- The components of the Bridgemate Pro scoring system are explained in Chapter 1. A brief and concise explanation is given of the individual components and how they relate to each other.
- Chapter 2 explains how to configure and install the Bridgemate Pro software and hardware and how to configure the Bridgemates per section and table. This chapter also explains how to set the radio channels to enable wireless data exchange.
- Chapter 3 explores the use of the Bridgemate Pro Control software program in more detail.
- Chapter 4 explains the different Bridgemate Pro Control options offered by the Bridgemate Pro server.
- Use of the Bridgemate Pro scoring devices is explained in Chapter 5.
- Chapter 6 highlights the additional functions for the Bridgemate.
- Chapter 7 contains tips on how to operate the Bridgemate Pro scoring system when multiple bridge clubs are playing simultaneously in one room. Practical advice is also offered on how to deploy Bridgemate Pro in big tournaments, involving different rooms and/or multiple servers.
- Chapter 8 describes using the Bridgemate system with ACBLscore.

Version numbers

This manual covers the following versions of the Bridgemate Pro components:

Bridgemate Pro Control	1.7.60	BPCsetup-1-7-60.exe
Bridgemate Pro server	1.2.6 (firmware version)	serv126.exe
Bridgemate Pro scoring devices	2.3.2a (firmware version)	US232a.bpf
Bridgemate RF Protocol	1.3 (firmware version)	rfmodem13.bpf

Download Software and Firmware

Bridgemate software and firmware can be downloaded from <http://www.bridgemate.us/support.php>

Chapter 1: Description Bridgemate Pro scoring system

This chapter describes the components of the Bridgemate Pro scoring system and how they relate to each other. It also explains how to use the Bridgemate Pro - from creating a session in your scoring program to registering the scores in the scoring program.

Please read this chapter carefully. Once you understand the function of the individual components and how they relate to each other, you will quickly get to grips with the Bridgemate Pro scoring system.

Description of components

The Bridgemate Pro scoring system consists of the following hardware and software:

- Bridgemate Pro scoring devices
- Bridgemate Pro server + power adapter
- USB-to-serial converter
- Bridgemate communication cable
- Tournament directors key
- Bridgemate Pro Control software

**Bridgemate Pro
scoring device
"Bridgemate"**

Bridgemate Pro server + power adapter

USB-to-serial converter

Bridgemate communication cable

**Tournament
directors key
"TD Key"**

Bridgemate Pro scoring devices

The Bridgemate Pro scoring devices are placed on the bridge table and are used to enter the results. For the purpose of simplicity, we shall refer to these input devices as "Bridgemates". Wireless communication between the Bridgemates and the server is established and maintained using radio frequency waves. Only one Bridgemate is required per table. The use of the Bridgemates is explained in more detail in Chapter 5.

Bridgemate Pro server

The Bridgemate Pro server, "server" for short, is a small device connected to the PC. It acts as a bridge between the PC and the Bridgemates. As the PC cannot communicate directly with the Bridgemates, the server is a vital component. The server is equipped with a radio transmitter and a receiver, establishing and maintaining wireless data communication with the Bridgemates. The server sends all movement data to the Bridgemates, including board numbers and pair numbers, and receives the board results in return. The server can control up to 128 Bridgemates simultaneously. The server can be powered by either an external power adapter or by 4 AA Batteries.

USB-to-serial converter

The server is connected to the serial port of your PC. If your PC does not have a serial port, use the USB-to-serial converter, included with the Bridgemate Pro server. To add a serial port to your PC, connect the converter to a USB port on your PC. It is recommended the same USB port be used every time. **Do not use a USB hub.**

Bridgemate communication cable

The Bridgemate communication cable enables you to connect the Bridgemate scoring devices directly to the PC. This in turn enables you to read the board results stored in the Bridgemate memory manually, or to install new firmware in the Bridgemates.

Tournament directors key (TD Key)

The tournament directors key, TD-key for short, is a small key that enables the tournament director to configure the Bridgemate for each section and table, and to activate the special TD menu.

Bridgemate Pro Control software

A specific program is required to control the server from the PC: Bridgemate Pro Control ("BPC"). This program runs on Windows 98 or higher and is controlled in part by your scoring program. BPC fully controls the server and data exchange between the server and the PC. BPC first saves all the relevant session data used by the server to control the Bridgemates. BPC then retrieves all entered board results from the server and stores these in the results file. All other server controls are also executed from BPC.

In addition, the following three components are important. Although they are not supplied together with your Bridgemate Pro scoring system, they are of crucial importance to the correct operation of the system.

- Client (=Personal computer with Bridgemate Pro Control software)
- Results file
- Scoring program

Client

The Bridgemate Pro Control program runs on a so-called "client" (Windows-based) personal computer (PC). The scoring program and BPC usually run on one client PC, to which the server is also connected. During big tournaments, multiple servers may be required to support the high number of Bridgemates and/or to establish and maintain the wireless communication between the server and the Bridgemates. In this case, the servers are connected to a network PC, and the network consists of multiple clients.

Note: The term "client" suggests that the Bridgemate Pro scoring system also consists of a PC network server. This is not the case. All (network) PCs running the Bridgemate Pro scoring system are known as clients.

Results file

The results file is created by the scoring program. It contains all the session data, including sections, tables, movements, etc. This data is generated by the session configured in the scoring program. BPC reads this session data and feeds the correct data to the server. During the session, BPC reads all the board results entered in the server and saves these in the results file. All Bridgemate Pro results files have the file extension .bws.

Scoring program

The scoring program creates the session and calculates the scores. After you have created a session, the scoring program will create the abovementioned results file. This file contains all the relevant session data. The scoring program will read all board results saved in the results file and process these during the session. These procedures are explained in more detail in the user manuals or help files of your scoring program.

Procedure

Having examined the individual components of the Bridgemate Pro scoring system, the next step involves assessing the entire process and how the different components relate to each other.

The process is outlined in the below diagram:

Activity	Explanation
Step 1: Session created in the scoring program	This is the starting point in the process. In the session, users can set the number of sections to be played, the number of pairs per section, boards and movements.
Step 2: Results file created by the scoring program	Using the session data, the scoring program creates a results file, containing all data relating to the sections, corresponding movements, boards and pairs.
Step 3: Bridgemate Pro Control reads the results file	The scoring program starts BPC. The results file is then read by BPC, generating the data for all tables used in each session.
Step 4: Bridgemate Pro Control transfers data to the server	BPC initializes the server using the data contained in the results file. All session tables are stored in the server. Movements from each table are included, so that the server knows (per round) which pairs and boards correspond with which table.
Step 5: The server has been activated and the Bridgemates can be activated	Now that all the relevant data has been stored in the server, the Bridgemates can be activated. The players activate the Bridgemates, which log in to the server. The results can now be entered.
Step 6: Results are entered in the Bridgemate and sent to the server	During this process, the board number and pair number/direction of play are verified for accuracy. Verification is executed via direct communication between the Bridgemate and the server. The Bridgemate itself does not contain any movement data. Entered board results are sent directly to the server. This data is stored in the server memory.
Step 7: Bridgemate Pro Control retrieves the data from the server. The information is saved in the results file	BPC reads all newly entered results from the server and saves them in the results file.
Step 8: The scoring program reads the results saved in the results file and adds these to the session	The scoring program reads the data saved in the results file and stores these in its session file. The results are processed and incorporated into the session data to calculate the final score.

Automatic launch from your scoring program

If your scoring program fully supports Bridgemate, BPC can execute steps 2 to 4 and read the data (step 7) automatically via one simple command from the scoring program. For further information on how to enable automatic launch of the Bridgemate Pro scoring system, please contact the supplier of your scoring program.

Chapter 2: Hardware Configuration

System requirements

Operating system

The Bridgemate Pro scoring system can run on Windows 98 or higher. Windows 2000 or higher is recommended.

Special Notes for ACBLscore: When using Windows 98, Office 2000 must be installed on the PC. There are no special requirements for Windows ME or higher.

Hardware

Recommended configuration: Processor Pentium II 300MHz or higher
Memory 64MB or higher

The PC must also be equipped with a serial port. If your PC does not have a serial port, use the USB-to-serial converter to create an extra serial port on the PC.

Installing Bridgemate Pro Control (BPC) Software

To install the Bridgemate Pro scoring system, run the "BMProSetup.exe" file. This software may be on the CD from Bridgemate.US, downloaded from your Bridgemate supplier's website <http://www.bridgemate.us/support.php> or the Bridgemate www.bridgemate.com website. The requirements for installing Bridgemate Pro software may differ, depending on your scoring program. For more information about where to install the software on your PC, please consult information supplied with your scoring program or by your Bridgemate supplier. To install Bridgemate Pro on a separate client, we recommend the default folder (=C:\Program Files\Bridgemate Pro).

Special Note for Vista PC's: Vista security precautions inhibit writing to the BPC log file when it is located in the default C:\Program Files\Bridgemate Pro folder. Therefore, it is recommended the BPC software option be configured to save the Bridgemate Log File in a different location e.g., the "root directory" C:\. See [Settings](#) on Page 18 for specific details.

See Chapter 8 for information on using ACBLscore as your scoring program.

Installing the server

Power supply

To operate the server, please ensure it is connected to the power adapter or is fitted with batteries. The server cannot operate without a power adapter and/or batteries. If batteries are not installed in the server and AC power is lost, any unsaved data in the server will be lost!

Read the safety instructions at the front of this manual before installing the server.

Power adapter

A 9~12V power adapter is supplied with the server. Plug the adapter into the wall socket and the into the black connector on the top of the server. The green LED on the server will light up, indicating that the server is now connected to commercial power.

Batteries

Batteries are used if there is no commercial power source, or as a back-up in the event of power failure. The battery compartment on the bottom of the server holds four AA 1.5 volt batteries (not included). Install the four batteries as indicated. A red LED will light up, indicating that the batteries have been installed correctly and no power adapter is being used. The approximate operating time of the batteries is 50 hours.

Warning

- *Always install the batteries as indicated. Incorrectly installed batteries could damage the server and the batteries. The batteries may start leaking, potentially damaging the server and voiding the warranty.*

- *With batteries installed (but also when powered by power adapter) the server is always actively waiting to receive a radio signal from a Bridgemate – even if the client PC is not running BPC. If a battery is not removed, and the server is running on batteries only, the battery set will drain in approximately 50 hours.*
- *When removing batteries from the Bridgemate Pro scoring device or server do not use your fingers or finger nails to remove the batteries; use a blunt object like a screwdriver or pen to safely remove the batteries.*

When both the power adapter and batteries are used, the server will obtain its power from the adapter. The batteries will only be activated if the adapter is not supplying power (e.g., during a power cut). Power will immediately transfer to the batteries and no data will be lost. We recommend installing batteries (as a back-up) while the server is in operation. This will ensure no data is lost during the session.

Switching on / off

The server will automatically switch on once the power adapter is connected or the batteries are installed. To switch off the server, both power sources will need to be removed. It is recommended the power adapter and batteries be removed after you have finished using the server. Only one of the four batteries needs to be removed. To remove the batteries, please use a screwdriver or pen; do not attempt to remove them with your fingers.

Warning Do not reinstall the removed batteries in the opposite direction. Instead, store them separately. Reinstalling batteries in the opposite direction will damage the server as well as the batteries and void the warranty.

Note: Some servers have a battery-power on/off switch. With the power adapter not connected, a **red** LED indicates good batteries. Instead of removing a battery, the on/off switch may be used to save battery power. When starting a new game, turn the switch on to confirm that the batteries are OK (**red** LED); then, connect the power adapter.

Connecting the server to the PC

Connect the server to the serial port of your PC. If your PC does not have a serial port available, use the USB-to-serial converter which is supplied with the server and connect it to a USB port. This adds an extra serial port to the PC. The converter comes with a set of software drivers which need to be installed separately. See the documentation included with the converter for more information.

When using a USB-to-serial converter, please ensure the serial port has a port number between 1 and 20. If the assigned COM port is 21 or higher, it will must be corrected manually in Device Settings of Windows Control Panel.

Special note when using the USB-to-serial converter.

It is recommended that the USB converter **always be connected to the same USB port**. Some computers will not recognize the converter when it is connected to a different USB port.

There is an LED in the ATEN USB-to-serial converter housing that flashes when data is being transferred through the cable. If this light does not flash, it may be an indication that the converter is connected to a USB port that is not configured with the appropriate drivers – or the assigned COM port is 21 or higher.

Note: BPC will only work with a COM port – 1 through 20.

With the USB converter connected to your computer, check the Windows' Device Manager for the COM port assignment. Left click  or  → RUN and enter the **devmgmt.msc** command.

Do not use a USB HUB. The USB-to-serial converter will not work reliably through a USB hub

Setting the region

When BPC is started with a new server attached to the PC, you will be asked to select the correct region. Select your region. To enable the server to transmit data to the Bridgemates over the correct radio frequency, it is vital that you select the appropriate region. The region setting in the Bridgemates is controlled by the Bridgemate firmware. The Bridgemate firmware must be for the same region as selected for the server. In other words, the server will be unable to transmit data to the Bridgemates if the server's region differs from the Bridgemates' region firmware.

Configuring the Bridgemates

Before the Bridgemates can be used in the session, the section and table for each Bridgemate will need to be configured. For more information on how to configure the Bridgemates, please see Chapter 5.

Setting the channel

The Bridgemate Pro scoring system can communicate over different radio channels. This enables users to install multiple systems next to each other without causing interference (see also Chapter 6, “Multiple clubs”). To enable a Bridgemate to communicate with the server, it must be set to the same channel as the server. The number of channels at your disposal depends on the region in which you are playing. Users based in Europe have 8 channels, while users based in North America have 128 channels. Australia has 64 channels. The default setting for the Bridgemate and server is channel 0 for each region.

Setting Bridgemate channel

The channel over which the Bridgemate communicates is set using the same menu used for changing the section/table settings. The tournament director (TD) key is used to perform this operation. See also Chapter 5 for more information.

```
SECTION: A      +/-  
TABLE:   1
```

Set the section and the table first, and press OK. The following screen will appear:

```
CHANNEL: 0
```

Press the CANCEL button to delete (erase) the set value and enter the new value. Press OK to save the new settings.

Setting server channel

The channel over which the server communicates is set via Bridgemate Pro Control, *Server* → *Channel selection* menu. For more information on how to set the channels, please see Chapter 4.

Operating instructions

The Bridgemate Pro server is very easy to use. Only a few instructions need to be followed. The following rules must be observed:

- The supplied power adapter may only be used with the Bridgemate Pro server. Under no circumstances should another adapter be used.
- Under no circumstances should the power adapter be connected to the data port of the Bridgemate (black connector at the back) as this may cause damage to the Bridgemate hardware. This data port may only be used with the Bridgemate communication cable and tournament director's key.
- Under no circumstances should the Bridgemate communication cable and TD-key be connected to the power adapter connection of the server.
- Install the batteries as indicated. Incorrectly installed batteries could damage the server.
- During use, make sure the server is placed horizontally on a level surface.
- Do not place any objects on the server and make sure there is as much distance between the server and other objects as possible. The fewer objects there are between the Bridgemates and the server, the better the data exchange will be.
- Where possible, make sure the Bridgemates and the server are not separated by a wall. The server should preferably be placed in a central location between the Bridgemates. If this is not possible, place the server as closely as possible to the Bridgemates along the edge of the playing room.
- When removing batteries from the server (or Bridgemates) do not use your fingers or finger nails to remove the batteries; use a blunt object such as a screwdriver or pen to safely remove the batteries.

Chapter 3: Bridgemate Pro Control software

The Bridgemate Pro Control program is the bridge between the results file and the server. BPC reads the session data from the results file and loads it into the server so that the server can control the Bridgemates. Then, BPC retrieves the entered board results from the server and stores these in the results file. BPC has been designed for simplicity and ease of use and is very user friendly.

This chapter contains information on the basic and advanced functions of BPC. For general program use, it is not necessary to know all the information contained in this chapter. When first starting the system, be sure to read the paragraphs “Launching Bridgemate Pro Control”, “Logging in and logging off Bridgemates” and “Board results” first.

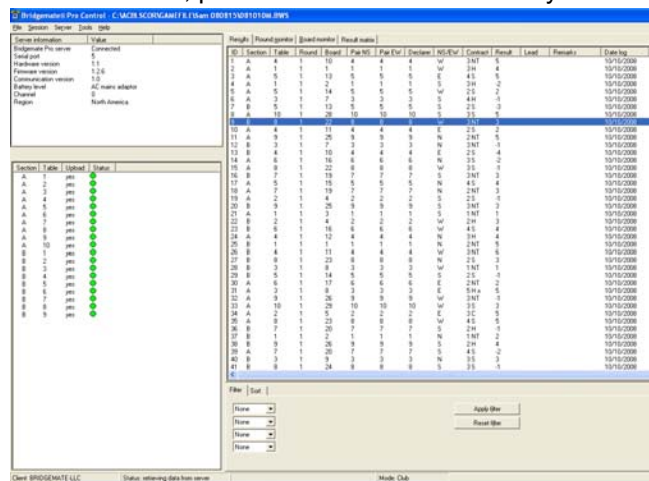

Launching Bridgemate Pro Control

□ Bridgemate Pro Control is launched from your scoring program. Depending on your scoring program, there are several ways to launch BPC. The majority of scoring programs have a launching function, enabling fully automatic activation of the Bridgemate Pro server and results reading. The scoring program generally also contains a function to launch BPC using the existing and active results file. For more information, please consult the manual of your scoring program.

The BPC screen, as displayed here, shows a typical “mid-game” condition where all Bridgemates are active and game results have been entered for a number of boards.

The name of the active results file is displayed in the title bar. If no results file is open, the text “No session active” will be displayed.

Normally, when BPC is launched from the scoring program, it is quickly minimized – returning to the scoring program display. However, if the program cannot connect to the server, the BPC screen remains visible to alert the user to an abnormal condition that requires attention.

Server information

The pane in the top left-hand corner of the screen displays information relating to the server. If a server has been found, the text “connected” and the version number will be displayed. You can also check which serial port is being used, and whether the server is running on a power adapter or batteries. If the power adapter is used, “AC adapter” will be displayed; if batteries are used, the power meter will display the number of operating hours remaining in percentages. If you are using batteries, we would recommend replacing them periodically rather than overusing them. BPC will indicate when to replace the batteries. Lastly, BPC will display the Region and Channel being used.

Tables

The bottom left-hand corner of the screen lists the tables in play. In Club (single computer) mode only the “*Client tables*” is visible. In Tournament (network) mode there are two tabs, *All tables* and *Client tables*. Below these tabs is a list of tables. The *All tables* tab contains all the tables stored in the results file. These are generally all the tables used in the session. The tables must be assigned to a client. The *Client tables* tab displays the tables assigned to the client PC you are currently using. The name of this client is displayed in the bottom left-hand corner of the screen. If you are using one PC for your sessions, all tables will be assigned to the same client. In this case, the *All tables* and *Client tables* tabs contain the same tables. If you are using multiple clients (e.g., in big tournaments), the *All tables* tab contains all tables in the session; the tables may be assigned to different clients. The *Client tables* tab only displays those tables assigned to that specific client.

The scoring program will create the results file for you. It is assumed that only one client is used. The program will automatically assign all tables to the PC you are currently using. You do not need to perform any manual changes. Manual changes are only required during big tournaments involving a network with multiple clients and servers.

Received board results

All board results read from the server are displayed in the right-hand side of the screen. For each hand/board played, the table(s), pair numbers, declarer, contract, tricks made or set and the exact time the board result was saved in the results file are displayed. BPC logs the time/date when the server was read and the board result was saved in the results file. The system does not log the time/date when the hand was actually registered in the server.

Filtering and sorting board results

The multi-criteria filtering and sorting functions are in the bottom right-hand of the screen. This enables fast searches for specific boards or to compare results using Section, Table, Round, Board, Pair NS and Pair EW filter/sort options.

Logging in and logging off Bridgemates

Logging in Bridgemate

Once the corresponding tables have been added to the server, Bridgemates can be activated.

Once the Bridgemate has been switched on, the start-up screen will display the text “Bridgemate Pro” followed by the version number. Press OK to go to the section and table number screen. Press OK again to log the Bridgemate in to the server. The flashing symbol in the top right-hand corner of the Bridgemate screen indicates that radio communication is taking place. Once the Bridgemate has logged in, all first round data will be displayed. The red symbol in the “Status” column of the *All tables* and *Client tables* tab will turn to green. This column also gives a clear overview of all inactive Bridgemates: if the status column is still red, the table has not activated its Bridgemate.

In the following cases, the Bridgemate will not be logged in to the server, but instead the message “SYSTEM NOT ACTIVATED YET” will be displayed and the Bridgemate is returned to the start-up screen:

- The corresponding table has not been added to the server.
- The session of this table has finished, all the results have been registered for this table. In this case, the Bridgemate will display the message “End of session”.
- Another Bridgemate with the same section/table number setting has already logged in to the server.
- The server is outside the range of the Bridgemate and cannot communicate with the Bridgemate.
- The server and the Bridgemate are not communicating over the same channel.
- The region setting in BPC does not match the region setting of the Bridgemate firmware region.

Logging off Bridgemate

The “End of session” message is displayed on Bridgemates that have completed all rounds and sent all the results. These Bridgemates are returned to the “Bridgemate Pro” start-up screen and are automatically logged off from the server. The status column of this table will turn red again, indicating that the session has been completed on this table. A clear overview is given of all the active tables. All Bridgemates with the green status display are still in use.

Bridgemates log off automatically at the end of the session; also there are two alternative options to log off manually:

- Use the reset function in the TD menu (option 0). The Bridgemate is returned to the start-up screen and is logged off from the server. See Chapter 5 for more information on how to reset the Bridgemates.
- Via menu *Server* (*Show tables*, *Log off table(s)*). See Chapter 4 for more information.

The latter function can be used if you need to use another Bridgemate for a specific reason but cannot log off via the reset function. You need to log off manually to start using another Bridgemate. See Chapter 7 for more information.

Board results

Reading from the server

Once the Bridgemates have logged in, they will feed data to the server during the session. Information is first saved in the server. BPC retrieves data every second from the server and automatically stores it in the results file.

Results – Round Monitor – Board Monitor – Result Matrix

Viewing results

Results that have been read and saved in the results file are displayed in the right-hand table of BPC. Per board, an overview is given of the corresponding table, the round, the players, the team and player declaring the game and the contract. The registration time and date is also displayed in the results file. Remarks are also displayed (“Not played” = the Bridgemate indicates that the game has not been played, 40% / 60% = arbitral score entered in the Bridgemate). Only information retrieved from tables assigned to the client you are currently using will be displayed.

Go to the menu *Tools* (*Show/hide columns* to select the columns you would like to show or hide.

Applying filter or sort order

As more board results are added and displayed, it becomes more time-consuming and difficult to find or compare specific results. Although you will generally use your scoring program to see the scores, the actual detail for each board may be viewed in BPC.

To display a specific group of board results, you can apply a filter to the entire list. This filter can be configured at the bottom of the screen. Enter specific criteria per section, table, round and board number and NS/EW pair number. It is possible to enter multiple criteria, for example section A, table 1, round 3. Per criterion, select the filtering preference - equal to, not equal, equal or less, equal or greater, between - and enter the relevant values. Select *Apply filter* to apply the filter. To remove the filter and display all board results, press *Reset filter*.

The sort function can be used to sort the (filtered) results according to various criteria. Select the criteria and choose Ascending or Descending for each criteria. Select *Apply sort* to start sorting the results.

Round and Board Monitor

Use Round monitor to view the number of boards that have been reported from each table in play. This enables Directors to identify slow players and visit the table, if necessary. Board monitor show which boards have been played at each table.

Result Matrix

This displays the contract, declarer and result for each board that has been played. There are 4 display options: Board / Table and Table / Board which may be used for all movements. Board / declarer and Declarer / board, however, should only be used for Howell movements or Mitchell movements where every pair has a unique number; using for Mitchell movements with NS4 and EW4, for example, produces a report that may appear confusing.

The display options are configured on the Bridgemate Options screen. See [Settings \(Options\)](#) on Page 18.

Creating Reports

Hand-record data from the right-hand display may be copied to an external file. For example, this can be used to create a report that compares the results achieved by the various teams that played each board.

- Go to the menu *Tools* → *Show/hide columns* to select the columns to be in the report.
- Select the records by highlighting the first entry for the report – hold the Shift key down and press End or use the ↑ or ↓ key to select the desired records.
- Right click on the highlighted records and select “Copy scores to clipboard.”
- The comma-delimited data may then be “pasted” into an external program (such as Word and Excel).

Note: If the results file (i.e., 070904E.bws) is opened by a different client computer, the results will not be immediately displayed in the right-hand panel. Follow the procedure shown under [Managing tables, Taking over tables from another client](#), on page 16.

Changing and deleting board records

You have the option of changing or deleting records saved in the results file and displayed in the result list.

Changing records

Right-click on the record you would like to change and select *Edit score*. A detail screen will appear displaying all the score data. You can now edit the result: Declarer is pair that played the hand; NS/EW is the “declarer” player; contract is ♣ = C, ♦ = D, ♥ = H, ♠ = S, no trump = NT, double = x, redouble =xx, pass = PASS. Enter a space between the value of the contract, the contract type and double/redouble. With “American Style” enter the numbers of tricks taken – or number of tricks down.

If the board result has already been read by the scoring program, it makes little sense to change the board result in BPC. It would be better in this instance to change it directly in the scoring program. If however the score has not yet been read, this change can be performed in BPC and then it will be read into the scoring program correctly.

Note that any changes made to the results in the results file will not be fed back to the server. Bridgemates will therefore show the unchanged result in the overview of previous results.

Edit score	
Score ID	3
Details	
Section	A
Table	1
Round	1
Board	3
Pair NS	1
Pair EW	1
Declarer	1
NS/EW	N
Contract	PASS
Result	

Deleting results

To delete a board result, right-click on the entry you would like to delete and select *Delete score*. To delete multiple records simultaneously, highlight the first record - hold the Shift key down and use the ↑ or ↓ key to select the records you would like to delete; alternatively, hold the left mouse key down and select records. The result will also be deleted from the server. A new score can be entered in the Bridgemate. Note: Deleted records will not be removed from ACBLscore if the result(s) were already posted into ACBLscore.

When a score is “deleted,” the entry is not erased. A duplicate entry is created with “Result erased” in the Remarks column. ACBLscore posts the first entry for each board and disregards the “Result erased” annotation and any new score that may be entered. With ACBLscore use the TD Key – function 3 which will actually erase the erroneous score from the result file and the corrected score entered in the Bridgemate will be the only result recorded.

Processing data in the scoring program

For information on how to read and process data from the Bridgemate Pro results file, please consult [Chapter 8: Using Bridgemates with ACBLscore](#) or the manual supplied with your scoring program.

Opening and closing results files

If no results files are opened in BPC, options are limited. The *Session* menu is inactive and no server data can be processed. During normal use of the Bridgemate Pro scoring system, the scoring program creates and automatically reads the results file into BPC. You do not need to open the results file or read the relevant session data. This is processed automatically. To read other results files in BPC, use the *Open* and *Close* functions in the *File* menu.

Opening existing results file

Use the *File* → *Open* menu to open an existing results file. If this results file has not been opened previously on this client, BPC will ask whether the client wants to log in to this results file. This step is necessary to add tables to the client and interact with the results file.

Closing the results file

Select *File* → *Close* to close the active results file. You can now open another results file.

Adding a client to the results file

The results file keeps track of which clients are using the results file. Your scoring program will automatically add your client to the results file.

If the results file has not previously been opened by the client PC (it was created on another PC), this client has not yet logged in to and cannot use the results file. To add a new client to the results file, open the results file on the relevant client. Confirm that the client is to be logged in to the results file. The results file may now be used.

Managing tables – Tournament (network) mode

Assigning tables to a client

Once a results file has been opened, all tables of the results file will be displayed. In Tournament (network) mode the *All tables* “Client” column will display the currently-assigned Client, or “not assigned” if the table is not assigned to any client. To assign a table to the client you are currently using, right-click on the table and select *Add to client*. To add multiple tables simultaneously, select the table by clicking and holding the left mouse button and the Shift key, or use the *Select all* function to select all the tables. Once the table has been added to the client, the client name will be stored in the table. You can only assign tables to the client (PC) you are currently using. If you are using multiple clients in a network, the results file will need to be opened manually per client and the tables added to that client.

Taking over tables from another client

To transfer a table that has already been assigned to another client to your own client, repeat the above procedure. Right-click on the table and select *Add to client* and confirm you would like to take over the table from another client.

Overview of tables assigned to a client

The client to which the tables have been assigned is displayed in the “Client” column of the *All tables* tab. The *Client tables* tab only displays those tables assigned to the current client.

Removing tables from the client

Click on the *Client tables* tab for an overview of all the tables added to this client. Right-click on the table you would like to remove and select *Remove from client*. The table will now be removed from the client.

Server control

Activating the server

To activate the server, connect it to the client PC and connect the power adapter or fit batteries. Once the server has been found, specific data will be displayed in the top left-hand corner of the BPC screen and the *Server* menu will be activated. You are advised to connect the server before launching BPC.

Resetting the server

The server contains no data when initially connected to a power source. New tables can be added instantly.

If the server contains data which you would like to delete, you will need to empty the server. This is done using the *reset* function. Go to *Server* → *Reset*. You will be asked to enter a verification number which is displayed on the screen. This verification number ensures that the server cannot accidentally be reset. Once the correct verification number has been entered, the server is emptied and all data removed.

Adding tables

The server is activated by adding tables. As soon as a table has been added, the server feeds this data to the corresponding Bridgemate, which in turn is activated. The Bridgemate cannot operate if the corresponding table has not been added to the server. Tables can only be added once to the server. If you attempt to add a table that has already been added to the server, an error message will be displayed.

To add a table to the server, go to the *Client tables* tab, select the relevant tables, right-click on one of the tables and select *Add to server*. The tables will now be added one by one to the server, and the corresponding movement loaded per table. An overview of the added tables will be displayed.

Removing tables

It is also possible to remove tables from the server using the *Client tables* tab. Select the tables you would like to remove, right-click on these tables and select *Remove from server*. The tables will now be removed. You will not be able to use any Bridgemates that are configured to these tables.

Synchronizing the server and client

All data relating to the tables is saved separately in both the results file and the server. In the event of a temporary disconnect between the server and the PC, there can be discrepancies between the server and the results file. These discrepancies can be rectified using the *Session* → *Synchronize client <-> server* menu function.

Check the relevant options to indicate your synchronization preferences. You must determine whether to synchronize the server to the results file, or whether to update the results file using the data stored in the server.

Tables in server which are not in client

Use this option to determine what to do with tables stored in the server but not assigned to the client. To delete these tables from the server, select “Delete from server”. To add them to the client, select “Add to client”. Tables that have already been assigned to another client can only be assigned to the current client if the “Take over from other client” option has been checked. If this box has not been checked, the tables cannot be added to the client.

Tables in client which are not in server

Conversely, some tables may have been assigned to the client but not to the server. To add these tables to the server, select the option “Add to server”. To delete these tables from the client, select the option “Delete from client”. This option also allows you to delete all the tables from the results file by checking the “Delete from session” option.

Delete tables from server which are not in session

The synchronization function will also verify whether the server contains tables not contained in the results file. These are so-called “obsolete tables”. Check the “Delete tables from server which are not in session” option to delete these tables from the server. If this option is unchecked, these tables will not be removed.

Synchronizing client to server and vice versa

As outlined above, the main function of the synchronization process is to synchronize the client to the server and vice versa. The default settings of this function are configured to synchronize the client to the server: tables that have been assigned to the server but not to the client are added to the client, and tables that have been assigned to the client but not to the server are removed from the client.

These settings will need to be adjusted when synchronizing the server to the client. In this case, delete all tables from the server that have been assigned to the server but not to the client (select “Delete from server”). Conversely, add to the server all tables that have been assigned to the client but not to the server (select “Add to server”).

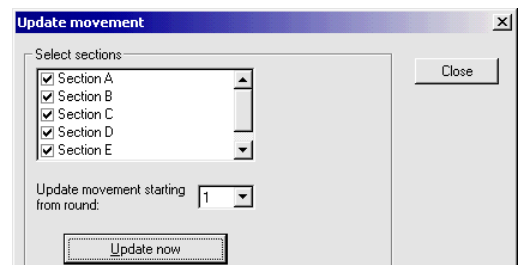

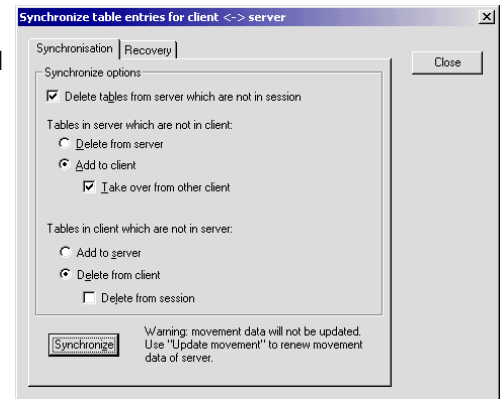

In all these cases, make sure the “Delete tables from server which are not in session” option is checked to delete all tables that have been assigned to the server but not the results file (and therefore not to the session). Should it transpire that these tables were correctly stored in the server and not in the results file, a new results file will need to be created, or the current file updated.

Recovering the server

The *Synchronize* menu function also offers users the opportunity to fully synchronize the results file and the server. To do this, go to the “Recovery” tab and press the “Recover server” button. All existing data will be deleted from the server and overwritten with the tables and the data contained in the results file. The server is synchronized with the current position of the results file. This function is ideal if the server loses its data and you wish to reconfigure the server with data that has been recorded in the results file.

Updating movement in the server

Movement data is assigned to all tables added to the server during the synchronization process. The synchronization function does not update the movement data of tables already stored in the server and which have not been updated. If the movement data of the results file

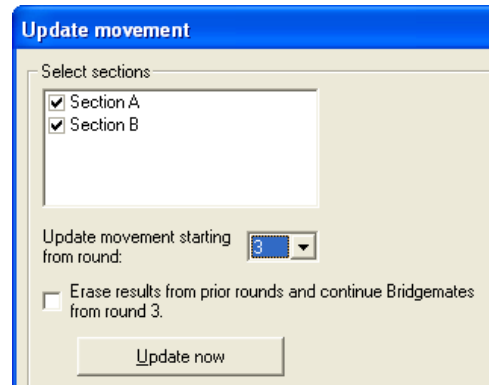

has been synchronized from the scoring program, and the scoring program does not order BPC to update this data, use the *Session* → *Update movement* function to update the server with the correct movement for these tables.

All sections are checked by default. Uncheck all sections that you do not wish to update. By default, data is updated from round 1. To update from a later round, select another round number using the selection option. Press *Update now* to update the sections with the correct movement. Any table data belonging to sections that you wish to update will now be deleted from the selected round onwards. A report will be displayed of the executed operations.

Note: Updating from a later round introduces the option to “Erase results from prior rounds...” If this is checked, all Bridgemates will start from the selected round.

Note: The scoring program normally updates all movements in BPC automatically. It is therefore not necessary to invoke this function manually.

Settings (Options)

Program settings of BPC can be changed using menu *Tools* → *Options*.

To disable the automatic server detection while the program is running, check *Disable server detection*. You may wish to do this when BPC is running without a server connected. During your sessions, however, you are always advised to leave this function unchecked.

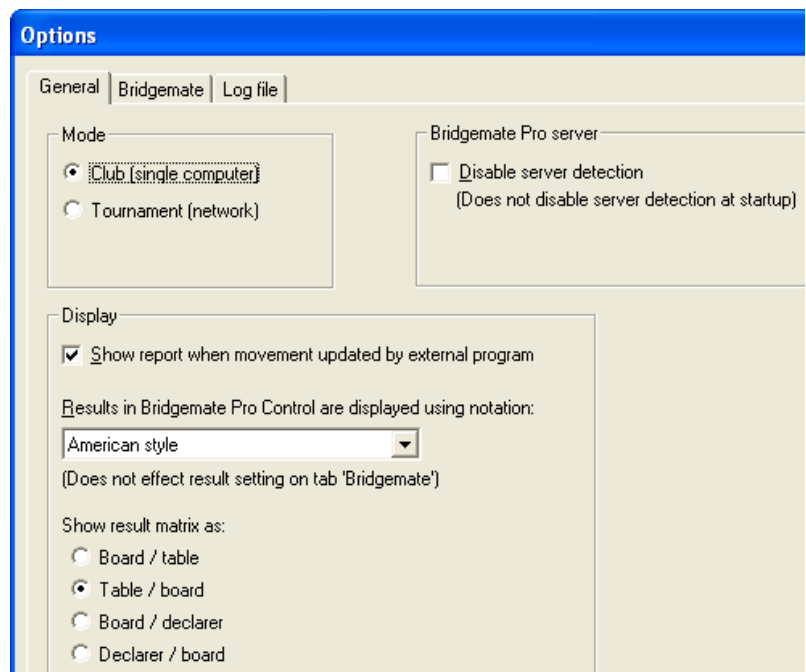

When the scoring program updates the movement, a report window is shown on the BPC screen window. If this option has not been disabled (by unchecking *Show report when movement updated by external program*, BPC will automatically close the report after 1 minute..

American style will display results as “tricks made” or “tricks down.”

The *Bridgemate* tab displays Bridgemate’s operational options. Normally, this will be set for options to be controlled by the scoring program. If “Bridgemate Pro Control” is checked, then options will be as set on this screen. With ACBLscore this would be used to capture the lead card.

Normally the *Log files are saved in:* option will have the “BMPPro.exe program folder” checked.

However, Windows **VISTA** security precautions block writing to the log file when Bridgemate Pro software is installed in the default “C:\Program Files\Bridgemate Pro” folder.

When you are running Vista, the “Other folder” should be checked – then click  and specify a non-“Program Files” folder such as C:\.

Double click on C:\ (or whichever non-“Program files” folder you have selected) and then close this window.

Chapter 4: Server Functions

Once the server is connected to the PC, the BPC *Server* menu is active. This menu contains several useful server functions. It is not necessary to open a results file to use these functions.

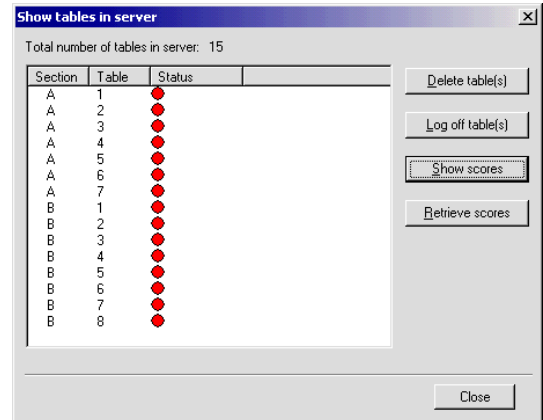

Overview of tables

Use the *Server* → *Show tables* menu to create an overview of the tables stored in the server.

Per table, the green or red status light indicates whether this table has logged in to the server, logged off, or has not yet logged in.

To delete a table from the server, select the relevant table(s) and choose “Delete table(s)”. The table(s) will be deleted from the server, as will all the data of the table(s).

To log off a table manually, select the relevant table(s) and press “Log off table(s)”.

Press the “Show scores” button to create an overview of the results entered by the Bridgemate. Select the table(s) of which you would like to see the board results and select this function.

Press the “Retrieve scores” button to move all entered results for the selected tables to the results file.

Overview of entered results

The *Server* → *Show all scores* menu function displays an overview of all board results entered in the server. Depending on the number of tables stored in the server, there may be a delay in reading and displaying the data.

Restarting Bridgemate network

The wireless network can be restarted from the server using the function *Server* → *Force restart*. Use this function to solve wireless communication problems between multiple Bridgemates and the server.

Resetting the server

The *Server* → *Reset* menu function resets the entire server and deletes all entered data. To avoid accidental resets, you will be asked to enter a verification number which is displayed on the screen.

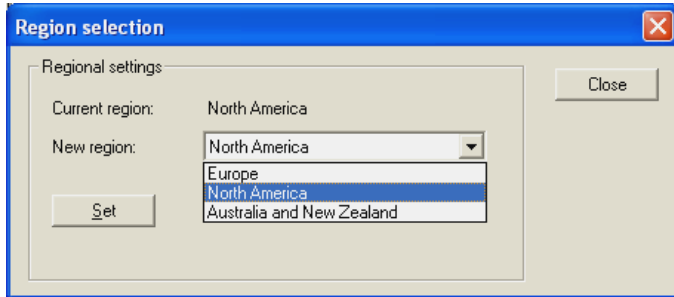

Note: If the server is not connected to the power adapter and/or is not fitted with batteries, all data will be lost. It is therefore not necessary to reset the server before disconnecting it from the power source or after connecting it to the power source.

Setting the region

The Bridgemate Pro score system communicates over a predetermined frequency spectrum. The permitted frequencies differ per continent. Three continents are currently supported: Europe, North America and Australia /

New Zealand. When first launching BPC with a new server attached, you will be asked to select your region. The server will select the corresponding frequency spectrum to communicate with the Bridgemates. Remember to use the correct Bridgemate firmware for your region. For Europe, all firmware versions with a European country code can be used (NL, FR, DE, EN, ES, PT, IT, DK, NO, SE). For North America, the firmware version with country code US is used. For Australia and New Zealand the country code is AU. This country code is displayed on the start-up screen of the Bridgemate.

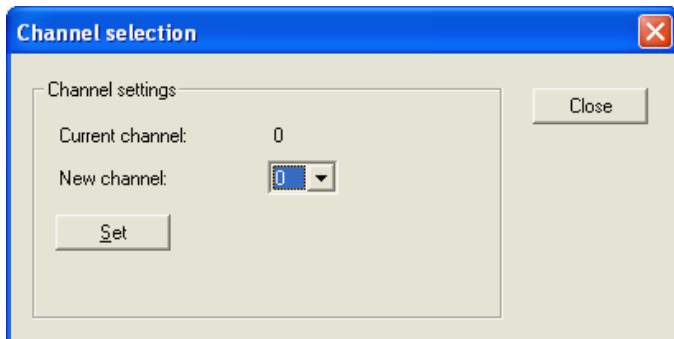

If you want to change the regional settings of the server, go to *Server* → *Region selection*.

The “Current region” function displays the current region. Select the new region and press “Set”. The new region has now been set. Remember, however, that Bridgemates must have firmware for the region selected.

Setting the channel

The server and the Bridgemates must be set to the same channel to communicate with each other. To set the channel on the server, use the *Server* → *Channel selection* menu.

The “Current channel” function displays the current channel. Select the new channel and press “Set”. The new channel has now been set in the server.

System functions

Trace & debug

This function is not covered by this manual.

Update firmware.

The server’s firmware may be updated in the future. If there is an update, only use files provided by your Bridgemate supplier and follow the instructions carefully.

Chapter 5: Use of the Bridgemate® Pro scoring devices

The Bridgemate is a small device designed to enhance the enjoyment of bridge for tournament directors and bridge players alike. The system enables you to enter results faster than before, and is guaranteed to prevent operator errors. As well as allowing players to enter board results, the Bridgemate also feeds information to the players, such as the achieved percentage on the board played, and the traveler overview. We are convinced that tournament directors and bridge players will appreciate the convenience of the Bridgemate!

Preparing the Bridgemate for use

The Bridgemates are individually packed in compact sturdy cardboard boxes. Each Bridgemate comes complete with four AAA batteries, which must be inserted into the bottom of the Bridgemate unit. The + and – signs in the casing indicate the insertion direction of the batteries. Insert all four batteries in the direction indicated, close the lid and press the OK button. Check whether the text “Bridgemate Pro” appears. The Bridgemate is now ready for use.

Exploring the Bridgemate

The keyboard

The Bridgemate keyboard contains 25 keys. Some of the keys have a dual function.

Keys	Explanation
1 to 9, 10	These keys are used to enter numbers in the Bridgemate, for example board numbers, pair numbers, contract and result. The 10 button is used to enter 0 (when entering member numbers, board numbers etc) and to indicate 10 as the lead card.
♣, ♦, ♥, ♠, NT	These keys enable you to indicate the contract type or the card color of the lead card.
+, -	Indicates overtricks or downtricks of the result.
=	Indicates that the contract has been exactly made.
J, Q, K, A	Use these keys to specify Jack/Queen/King/Ace as the lead card.

X, XX	Double or redouble.
N/S, E/W	Declarer's direction of play.
PASS	Indicates a pass-out.
CANCEL	Correct (erase) an entry and cancel commands.
OK	Confirm an entry.

Switching on/off

The Bridgemate does not have a separate on/off button. To switch on the Bridgemate, press the OK button. It is not possible to switch off the Bridgemate manually. The Bridgemate will automatically switch off after it has been idle for a while, i.e., no buttons have been pressed. No data will be lost when the Bridgemate switches off. Simply press the OK button to continue as before. In other words, you can continue entering results as soon as the Bridgemate has been activated again.

The default autopower-off time is set to 20 seconds. This value can be changed to between 5 and 60 seconds. See Chapter 6 for more information.

Activating the Bridgemate

When switching on the Bridgemate for the first time, you will be taken to the main screen:

```
BRIDGEMATE PRO
v2.3.2a US           (version number and language code may differ)
```

Press the OK key again to view the Bridgemate's Section / Table settings. The default setting is Section A, Table 1.

Configuring Bridgemates for Section/Table entry at each table at the beginning of a game/session.

1. Bridgemates may be configured for manual Section and Table entry at each table at the beginning of each game/session. When the "Bridgemate Pro" screen displays - insert the TD-key in the Bridgemate. The following screen will appear:

```
SECTION: A  +/-
TABLE:    1
```
2. Use the minus (-) key to change the display to read:

```
SECTION: SEL +/-
TABLE:   SEL
```
3. Press OK to confirm the "SEL" configuration. The screen will now display: CHANNEL: 0_
4. If you wish to leave the channel number unchanged, press OK. To use a different wireless channel, press the CANCEL button to delete the number, then enter the new channel and press OK. The Bridgemate will confirm that the settings have been saved. The SEL configuration remains active until changed by using the TD key.

To exit the screen without making any changes, simply remove the TD-key.

Pre-assigning Bridgemate Section and Table

1. You may program the Section and Table for each Bridgemate. To do this – when the "Bridgemate Pro" screen displays - insert the TD-key in the Bridgemate. The following screen will appear:

```
SECTION: A  +/-
TABLE:    1
```
2. Use the + and - key to adjust the Section. Sections range from A to Z.
3. Press OK to confirm the section. The following screen will now be displayed:

```
SECTION: D
TABLE:   1_
```

4. Use the number keys to set the correct Table number. Press CANCEL to delete the current number. Table numbers range from 1 to 511.
5. Press OK again to confirm the table number. The screen will now display: CHANNEL: 0_
6. If you wish to leave the channel number unchanged, press OK. To use a different wireless channel, press the CANCEL button to delete the number, then enter the new channel and press OK.
The Bridgemate will display a message informing you that the settings have been saved. The Bridgemate will retain these settings until you next change the section and table number. In other words, these settings will be retained even after the session has been completed. It is therefore not necessary to change the settings for the next session. All you need to do is move the Bridgemate to the correct table.

Activating the server

For more information on how to activate the server, please see Chapter 3.

Replacing batteries

The Bridgemate will check the remaining battery life each time it is activated for a new session. If the battery power is extremely low, the “Replace batteries” message will appear. Although it is safe to continue using the Bridgemate for several more sessions, it is recommended that you replace the batteries as soon as possible. The average battery life is approximately 300 sessions. However, this depends largely on the length of each session, the time frame over which these sessions are played, and how the Bridgemates are stored.

Entering results with the Bridgemate

Who operates the Bridgemate?

As with the score card, the Bridgemate is normally operated by North. North is responsible for the correct operation. East (or west) is responsible for verification of the entered board results.

Switching on/off

To switch on the Bridgemate, press the OK button. The Bridgemate will automatically switch off after it has been idle for a while, i.e., no buttons have been pressed. No data will be lost. Press the OK button again to continue.

Activating the Bridgemate

At the start of the session, the Bridgemate will, by default, display the “Bridgemate Pro” main screen, including the version number and language code. Press OK to view the Bridgemate’s Table and Section settings.

- Pre-assigned Section/Tables: The display will show the assigned Section/Table, i.e., SECTION: B
TABLE: 3
To activate the Bridgemate and log on to the server, press OK again.
- Manual Section/Table entry: The first line will show the last-used Section, i.e., SECTION: A +/-
If needed, press + or – to change the Section letter. Press OK.
Enter the Table number and press OK. TABLE = A2 will display.
CONFIRM -> OK If this is correct, press OK.

The Bridgemate has now been activated and can be put into use.

Entering member numbers (optional)

If you have specified in BPC that you wish to enter member numbers, the Bridgemate will ask you – after activation and before the start of the first round – to enter the member numbers of the four players.

N: _ and E: _
S: _ W: _

The number must be numeric and has a maximum of 12 digits. Use the number keys to enter the number, and confirm by pressing the OK key. If a player does not know his member number or does not have a member number, press OK without entering a number. No number will be registered for this player.

Once a member number has been entered for West, the numbers will be fed to the server and the Bridgemate will start the first round.

Information before the start of the round

At the start of each new round, the Bridgemate will display the new round and the expected pairs, as well as the direction of play. The board numbers will also be displayed. For example, you can verify at the start of the round whether you are seated in the correct direction and have the correct boards on the table. This information is displayed as follows:

```
ROUND 1, 1-4
NS: 1   EW: 2
```

Press OK to confirm this screen and continue with the board input.

Entering board results

The following screen will be displayed when entering the board results:

```
BOARD: _
CONTR:
```

The flashing line indicates the input position. Before starting the game, enter the board number and press OK to confirm. The Bridgemate will verify the number. An error message will be displayed if the board number does not appear in that round:

```
BOARD NUMBER
INCORRECT! R1
```

R1 indicates that the Bridgemate is in round 1. The message will disappear after a few seconds – or you may press CANCEL. You will now be asked to enter the correct board number.

If the board is entered a second time within the same round, the following message will be displayed:

```
BOARD ALREADY
PLAYED! R1
```

It is not possible to enter a board twice in the same round. If the board result has been entered incorrectly and requires correction, call the director. If supported by your scoring program, the director may “delete” the board result using the TD-key and the correct score may be entered.

Use the Bridgemate settings to indicate whether you would like the Bridgemate to check whether the entered board number corresponds to the logical order. If the Bridgemate expects a different board number to be entered, the following message will appear:

```
BOARD OUT OF
ORDER, ACCEPT?
```

Press CANCEL to return to the previous screen and press CANCEL again to erase the board number and to enter a new board number. If you do wish to play an out-of-sequence board, press OK. The board number will be accepted, and the Bridgemate will assume that you have chosen to deviate from the logical order.

Once the board number has been entered and confirmed, the cursor will jump to the second line. You can now begin bidding. As soon as the contract has been determined, enter the contract type and the direction of the declarer.

To enter the contract, use numbers 1 to 7 and the ♣, ♦, ♥, ♠ and NT keys. If required, you can also use the x and xx keys to indicate double or redouble. To specify the declarer, use the N/S and E/W keys. If the declarer is North, press N/S once. If the declarer is South, press this key twice. Alternatively, if the declarer is East or West, press E/W once or twice. The screen is displayed as follows:

```
BOARD: 13
CONTR: 3NT x E_
```

Press OK to confirm this.

If the OK key is pressed before the Declarer has been entered, the display will read:

```
ENTER DECLARER
N/S or E/W
```

Entering lead card (optional)

If you have specified in BPC that lead cards must be entered, the Bridgemate will ask you to enter the lead card.

LEAD: —
RESULT:

Select the lead card using keys 2 to 9, 10, J, Q, K or A and the card type using ♣, ♦, ♥ or ♠. You are free to decide in which order to enter the card and the card suit. Press OK to confirm the lead card.

Entering the result

Once you have finished playing the board, you can enter the result. Using “American Style,” when the contract has been made enter the number of tricks taken. If the contract was not made, use the – key followed by the number of tricks “down.”

Depending on the settings in BPC, the result can also be entered as the total number of tricks won or by using the American style (tricks made/down). When using the American style, enter downtricks using the – key; when the contract has been made, enter the number of tricks (over book) that have been taken. The = key may also be used when the contract has been exactly made.

Verification by East or West

Once you have entered the contract, the lead card (if requested) and the result, press OK. “Verification by East or West” will display. The Bridgemate must now be passed to East or West to verify the entered data.

The verification screen will for example be displayed as follows:

Board 13, 3NTx +1	Board 13, 3NTx 4
by East, -950	by East, +950

The board data entered by North is displayed on one total screen (the lead card will not be displayed). In addition, the number of score points obtained on this board will be displayed. Depending on the BPC setting, the number of score points will be displayed as assigned to the North/South pair or to the declarer.

Confirming board result

East or West verifies the data displayed on the verification screen. If this data is incorrect, East or West will press CANCEL to edit the data. If the result is correct, East or West will press OK to confirm the result. The message “Entry completed” will now be displayed. The data is saved and sent to the server. It is now no longer possible for players to edit the results.

Overview of percentage achieved and previous results (optional)

Once East or West has confirmed the board result, players have feedback options for viewing their achieved result and board results achieved by other pairs. Depending on the BPC settings, the following information can be displayed:

- Achieved percentage for the entered board result
- Overview of scores at other tables on the entered board

If one (or both) of the functions is activated, the message “Entry completed” will also display the text “Show results?”. Press OK to view information on the achieved board result.

The percentage achieved on the board will be displayed first. This is done by reviewing the other results registered on the board, the value of the entered score and how the entered score compares with the other results. This percentage will have little significance at the start of a session. As the session progresses, the percentage will approximate the actual end percentage on the board.

3NTx E +1	/when showing	\	3NTx E 5	/when showing	\
-950 = 33%	\North/South results/		+950 = 67%	\declarer results/	

The percentage relates to the achieved number of score points. Depending on the BPC setting, this always applies to the North/South pair and/or the declarer. Press OK to exit this screen.

If you have set BPC to also display the scores of other pairs on the entered board, the Bridgemate will display these results. This screen is displayed as follows:

```
S 2S 2 +110
E* 3NTx 4 -950
```

The scores are sorted from high to low on the basis of the achieved score points of North/South. The score achieved by the table (viewing the results) is displayed with a * (optional). The scores are displayed in pairs. If there are multiple board results, press OK to view the next results.

It is possible to set BPC to view the scores again after they have all been displayed.

End of round

At the end of the round, the Bridgemate will display the message "End of round". You do not need to do anything. The Bridgemate will automatically switch off after a few seconds. Press OK again to begin entering the results in the next round.

End of session

At the end of the last round, the Bridgemate will display the message "End of session" and return to the Bridgemate Pro main screen after a few seconds. The Bridgemate has completed its tasks and can now be safely stored away.

Special entries: pass-out and board not played

If the players have passed four times without offering a contract, enter 'Pass' at CONTR and confirm with OK. You will not be asked for the lead card and the result, and the Bridgemate will switch immediately to the verification screen.

If a board has not been played in a particular round due e.g., due to time constraints, the Bridgemate must be informed. If this step is skipped, the Bridgemate will remain in the uncompleted round, and other pairs will be prevented from entering their results. To enter an unplayed board, press the 10 key in the CONTR screen. The screen will now display the text "NO PLAY". Confirm by pressing OK. The Bridgemate will now display the verification screen again.

The Bridgemate will not display an overview for unplayed boards. As it is possible to play the board in a later round, players must be prevented from seeing the results of previous boards. The board can be played afterwards without the Bridgemate; in that case, the relevant score is entered manually in the scoring program.

Rectifying an input error

If you have made an input error, press CANCEL to rectify the error. You can return to the board number input screen by repeatedly pressing this button. It is also possible for East or West to reject the entered data by pressing CANCEL. The Bridgemate will now return to the input screen, and the entered data can be deleted by pressing CANCEL again. Once East or West has confirmed the score and the message "Entry completed" has been displayed, the score cannot be edited. Only tournament directors are authorized to change a score after it has been verified.

Please note:

- It is not necessary to enter the number of score points (+420, -50 etc.) in the Bridgemate. The Bridgemate will calculate the score using the entered contract and result, taking vulnerability into account.
- The Bridgemate monitors the active rounds. In case of a sit-out, the Bridgemate will skip this round.
- Before starting a new round, verify whether you and your opponents are seated in the correct direction to avoid playing in the wrong direction. At the start of the round, press OK to display the directions.

Reading Bridgemate Pro results

Results to Bridgemate Pro Control

Information entered on the Bridgemates is first saved on the server. The BPC program periodically reads the data from the server and stores these in the results file.

Reading scores in the scoring program

Once the results have been saved in the results file, your scoring program can read and process the scores. For more information, please consult the manual of your scoring program.

TD menu

Tournament directors have far-reaching powers to verify the entered results. A special TD menu is available for this purpose. To access this menu, please use the TD-key supplied with the package.

Activating the menu

To activate the TD menu, insert the TD-key in the communication port of the Bridgemate. This requires the Bridgemate to be switched on and waiting for data to be entered (board, contr, lead, result input screen). It is for instance not possible to activate the menu if the device is in the verification screen or is displaying an overview of previous results.

To exit the menu, simply remove the TD-key.

Menu options

Once you have inserted the TD-key, the following screen will appear:

TD-MENU

You now have seven options:

1. To enter an arbitral score, press '1'.
2. For an overview of the entered scores, press '2'.
3. To delete an entry, press '3'. [Note: Only use this if supported by your scoring program.]
4. If you would like to view the corresponding table and section of the Bridgemate and/or the corresponding round and pairs, press '4' (retrieve status).
5. To retrieve an overview of the board numbers not yet entered, press '5'.
6. To reset the Bridgemate, press '0'.
7. To set the contrast of the screen, press + or -.

Entering an arbitral score

It is possible to specify in the Bridgemate that an arbitral score must be entered for a certain board. Proceed as follows: enter the board number and confirm with OK. The cursor is positioned at CONTR. Insert the TD-key in the Bridgemate to activate the TD menu. Press '1' and confirm (OK button) "Arbitral score?" Next, enter the arbitral score for each pair:

NS : _
EW :

You can choose between 40% (average-minus), 50% (average) and 60% (average-plus). Press 4 or - to enter 40%, 5 or = to enter 50%, 6 or + to enter 60%. It is not possible to enter a value other than these percentages. Press OK after you have entered the percentage. Do this for both pairs. The screen will now return to the TD MENU. Remove the TD key. The assigned arbitral score is now displayed at CONTR. Press OK to confirm this, and confirm the verification screen. The Bridgemate has now saved an arbitral score for this board and will feed this to the scoring program during read-out.

Retrieving overview

To obtain a board overview without reading the data or completing a board input, it is possible to use the special overview function of the TD menu. To access this overview, insert the TD-key and press '2'. You will be asked to enter the corresponding board number. The overview displays the declarer pair number, declarer position (e.g., N, S, E, W), contract and result. The number of score points is not displayed in this overview. If the screen returns to the TD menu after the board number has been entered, no results have been registered for this board at this table.

Erasing entry

Tournament directors have the option of erasing entries. This can either be a board result from the current round or the previous round. If the same board is being played more than once at the table where you wish to correct an erroneous score and the result for the board in question have not yet been entered in the current round, the board result of the previous round will be erased. This method enables you to erase the current- or previous-round's result on this board from the Bridgemate.

To erase a board input, insert the TD Key, press '3' and press OK when prompted to confirm "Erase result?." You will be asked to enter a board number. Enter the board number and confirm with OK. If that particular board can be erased, the message "Board erased" will be displayed to indicate that the entered result has been erased. If the board has not yet been played, or not played at this table in the current or a previous round, the TD menu will be displayed again after you have pressed OK.

Once a board result has been erased, the correct information may be entered.

Note when using the ACBLscore: Board results may be erased at the Bridgemate **only** if the result hasn't already been posted into ACBLscore. Once a board has been posted into ACBLscore, the correction must be made in the scoring program.

Retrieving current status

If you no longer know to which table and section the Bridgemate relates, you can retrieve this information in the status part of the TD menu. To do so, insert the TD-key in the Bridgemate and press '4'. Press OK when prompted to confirm 'Status?' The expected table and section of the Bridgemate will be displayed first. Press OK again to view the current round of the Bridgemate and the corresponding pairs at the table. You will also see the boards to be played in this round.

Overview of missing results

From the TD menu, it is easy to establish which boards of the round have not yet been entered. Press '5' and OK when prompted to confirm 'Missing boards?' The Bridgemate will now display the numbers of the boards not yet entered in this round at this table.

Resetting the Bridgemate

The Bridgemate can be reset from the TD menu. Press '10' and OK when prompted to confirm 'Reset?'. It will now return to the main screen.

Setting contrast

It is possible to set the contrast of the screen from the TD menu. Press + to make the screen darker, – to make the screen lighter. Press the button several times to adjust the contrast. It is also possible to adjust the contrast – without using the TD Key – if the Bridgemate is displaying Bridgemate Pro in the main screen.

Please refer to the "Solutions for non-functioning Bridgemates" laminated sheet – Items 5 and 6 for procedures to follow if the screen is all black or there is no display at all.

Chapter 6: Additional Bridgmate Functions

Bridgmate Pro Control (BPC) has a number of functions specifically designed for the Bridgmate terminals.

Reading results manually in Bridgmate

All entered data are also saved in each Bridgmate's local memory. If for whatever reason a Bridgmate is unable to feed one-or-more board results to the server, the results may be read manually into BPC at the end of the session.

Connect the Bridgmate Communication Cable to a serial port of your PC. On the BPC menu select *Session* → *Read Bridgmate Locally*. Click OK on the screen display.

All board results from this Bridgmate are read and stored in the results file along with any of this Bridgmate's results that were already received by the server. These results can now be processed in the scoring program in the usual way. They are also displayed on the BPC screen.

Connect the Bridgmate Communication Cable to the Bridgmate via the data port at the back of the Bridgmate. Press OK on the Bridgmate.

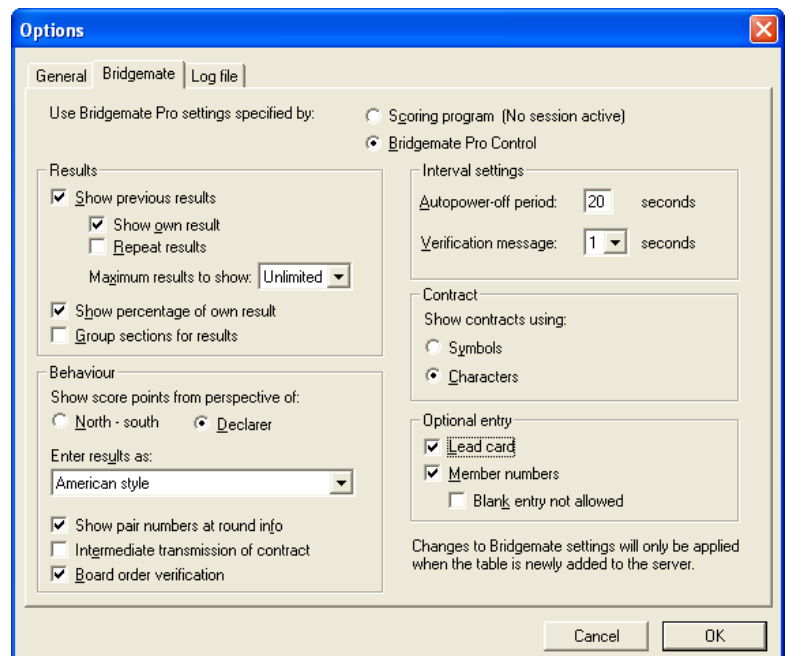

This function can be used, for example, in the event of PC and server data loss. See Chapter 7, page 33 *Server data loss*, for more information about the applicable procedures in the event of data loss.

Bridgmate settings

All Bridgmate settings can be changed via the menu *Tools* → *Options* → *Bridgmate* tab.

Bridgmate settings can be specified either by the scoring program or by BPC. If you want your scoring program to control Bridgmate settings, choose "Use Bridgmate Pro settings specified by Scoring program". The settings information is included in the results file by the scoring program. Consult the manual of your scoring program for more information on how to set Bridgmate settings through the scoring program. Select "Use Bridgmate Pro settings specified by Bridgmate Pro Control" when you want to manually set the Bridgmate settings disregarding the information provided by the scoring program.

Displaying previous results

To enable the Bridgmate to display an overview of previous board results of a particular game, check the "Show previous results" option. If you would also like to display your own score, check the "Show own result" option. Your table is indicated by an * on the Bridgmate screen. To enable the players to display multiple overviews, check the

“Repeat results” box. Limit the number of scores to be displayed by entering a maximum number. To remove the limitation, set the maximum to unlimited.

To display the board result percentage achieved so far, check the “Show percentage of own result” box.

When multiple sections are calculated as one, check the option “Group sections for results”. The percentage will be calculated across all sections, and the results on all boards with the same number are shown in the previous results overview. Especially in this case, it is recommended to set a maximum number of scores you want the Bridgemate to show. Without doing so, the players will use up a greater amount of time reviewing the results at large sessions.

Displaying score points

The score points can be displayed from the perspective of the declarer or from the N/S direction of play. In the latter case, score points are obtained by displaying E/W as an opposite score (4H – making 5, by E/W is displayed as -40 or -650). This applies both to the score points displayed in the verification screen for E/W and to the percentage overview screen. The overview of previous board results always shows the scores as N/S scores.

Entering results

Results can be entered in three ways: as overtricks / downtricks, as the total number of tricks won, or by using the American style (tricks made/down). The default setting is overtricks / downtricks.

Displaying the pair number

If you do not wish to display the pair numbers in the round-information screen, disable the “Show pair numbers at round info” function. This option can be used for team-of-four events.

Transmitting contracts

The Bridgemate offers users the option of feeding information to the server immediately after the contract and/or lead card have been entered. This could for example be displayed on vuegraph presentations while the game is still being played. If you wish to feed this information to the server, check the “Intermediate transmission of contract” box.

Board order verification

Check the relevant box if you would like the Bridgemate to check whether the boards are to be played in the logical order. An error message will appear on the Bridgemate if the entered board number does not correspond to the logical order. The logical order starts with the first board of the round and the numbers of subsequent boards should be entered in ascending order. For example, if boards 1 to 3 are to be played in round A, the logical order is 1, 2, 3,.

Lead card

If you would like to enter the lead card on the Bridgemate, check this setting.

Member numbers

If you would like to enter the member numbers on the Bridgemate, check this setting. By default, players have the option of leaving the entry blank when entering the member number. If entry of member numbers is compulsory, check the “Blank entry not allowed” box.

Show contracts using

Use this function to specify whether the Bridgemate displays card symbols or letters for the contracts.

Autopower-off periods

The Bridgemate will automatically go into autopower-off mode if it remains idle for a while. The default setting is 20 seconds. To change this setting, enter a value between 5 and 60 seconds in “Autopower-off period”. In “Verification message”, enter the length of time you would like the message “Verification by East” to be displayed on the screen.

Note: Any change of options takes effect:

- for all tables – when a completely new session is created (and BPC is started for the new session)
- for only new table(s) added to an existing session.

System functions

The Bridgemate has two separate system functions. In both cases, the Bridgemate communication cable must be connected to the PC.

Changing Firmware

The Bridgemate is controlled by a piece of software in the internal memory. This software can be changed from BPC. This means that the Bridgemate can be updated and new functions can be added. The language selection option for example can also be changed. In other words, the Bridgemate can be updated without requiring you to purchase new Bridgemates.

To update the Bridgemate firmware, proceed as follows:

1. Connect the Bridgemate communication cable to the serial port (or the USB-to-serial Converter).
2. Go to *Tools* → *Bridgemate* → *Update firmware*.
3. Press *Choose firmware file*.
4. Select a Bridgemate firmware file to be loaded into the Bridgemate. These files have the extension '.bpf'. Once the file has been selected, the location, version number and date of the file are displayed.
5. Switch on the Bridgemate and connect it to the PC. If the Bridgemate is not switched on, connect it first and press OK.
6. The program is written in the Bridgemate. Wait to disconnect the Bridgemate until the text "*Writing firmware completed. Disconnect Bridgemate*" is displayed.
7. The new program has now been loaded. Press OK to activate the Bridgemate.
8. Note: With the firmware update/reload, the Bridgemate will be "reset" to Section A, Table 1. Use the TD-Key to change the Bridgemate to the desired Section and Table or the optional player entry of section and table..

The process will be cancelled if an error occurs during loading. When this happens, disconnect and reconnect the Bridgemate to repeat the process. If the problem persists, replace the Bridgemate batteries.

WARNING

Only use this option on the instructions of the supplier. Incorrect use may result in faulty operation. Only use those files supplied by your supplier and follow the instructions carefully. We strongly advise against any other use.

Bridgemate analysis

The *Tools* → *Bridgemate* → *Bridgemate analysis* menu displays relevant information about the Bridgemate, including version numbers, autopower-off time and/or correct operation of the Bridgemate.

When the 1st screen is displayed, connect the Bridgemate Communications cable to the serial port and click OK on the screen.

When the 2nd screen appears, connect the mini plug to the jack on the back of the Bridgemate; press OK on the Bridgemate and then click OK on the screen.

The screen to the right shows a normal Bridgemate that is deactivated, i.e., it is in "sleep mode."

Note: When the 2nd screen appears, you may first press OK on the Bridgemate (wake it up), connect the mini plug and then click OK on the screen. Using this scenario, the Current status will display "Bridgemate Pro main screen." There are other descriptions for other Bridgemate conditions.

```

Report
-----
Bridgemate analysis report

```

Chapter 7: Tips for use

Replacing Bridgemate

If for whatever reason you need to replace a Bridgemate during a session, and you are unable to log off the Bridgemate using the Reset TD menu option, proceed as follows:

- In BPC, go to Server → Show tables.
- Select the relevant table and press “Log off table(s)”. The Bridgemate will now be logged off from the server.
- Take another Bridgemate and use the TD-key to set this Bridgemate to the correct section and table number. Also make sure to set the correct channel.
- Activate this Bridgemate using the OK button. The Bridgemate will take over the position of the old Bridgemate.

Recovering the server

If the server is accidentally disconnected from the power supply, all data will be lost and the Bridgemates will stop functioning. BPC is able to recover the old situation. Proceed as follows:

- Make sure the server is reconnected to the power adapter.
- In BPC, go to menu Session → Synchronize client ↔ Server.
- Go to the “Recovery” tab and press “Recover server”. All information from the results file will now be moved to the server.

When recovering the server, it is important that all data have been moved from the server to the results file. If this is not the case, information that has not been moved to the computer will be lost and the server cannot restart fully from the previous position. Make sure, therefore, that the data retrieval is always activated during the session.

Procedure in the event of data loss

The security of the board results entered in the Bridgemate Pro scoring system is given top priority. As the best defense against data loss the Bridgemate system stores the results in multiple locations, namely:

- *The Bridgemate memory*
All results entered in the Bridgemate are sent to the server. At the same time, each result is also stored in the Bridgemate’s internal memory. These results are stored until the Bridgemate is started up again for a new session. Then the memory will be erased.
The data remains stored in the internal memory of the Bridgemate, even if no batteries are installed.
- *The server memory*
Results entered in the Bridgemate are sent to the server, and stored in the server’s internal memory. It is essential that the server is connected to a power source (batteries and/or power adapter). If there is no power source, or in the event of power failure, all data will be lost.
- *BPC results file and log file*
BPC continuously reads the new results from the server and processes these into the results file. This data is immediately written to the hard disk of your PC, ensuring the data is safe even in the event of power failure. All results shown on the BPC screen have been written to the results file.

BPC also has a log file, containing all the relevant events. All received results are written to this log file. To view the log file, go to the Tools → Show log file menu. The actual file – BMProLog.log – is located in the Bridgemate Pro folder – normally C:\Program Files\Bridgemate Pro.

Special Note for Vista Users: Because of Vista's "security precautions," use the BPC option to specify the location where the Log File is saved. See [Settings](#) on Page 18, Chapter 3, for specific details.

- *Session file in your scoring program*
Lastly, the scoring program retrieves the results from the results file. The scoring program stores the results in its own files.

The results are therefore stored in five locations in total. In the event of data loss in one of the five locations, it is possible to check whether the results are still stored at the next level up, and to reprocess the results from there.

Scoring program data loss

In the event of data loss in the scoring program, check whether the results are still stored in the BPC results file. The recommended method is to launch BPC from the Windows Start menu → All Programs → Bridgemate Pro. Once BPC is started up, go to the *File* → *Open* menu and select the results file (with the .bws extension) used for your session. If the results appear on the screen, they have been stored in the results file. The results can now be reprocessed from the scoring program. For further information about processing Bridgemate results, see the instructions included with the scoring program.

BPC data loss

If the results file contains no results (see the above-mentioned step), it is possible to retrieve them from the server and to read them in the results file. The first step is to check whether the results are still stored on the server. Use the *Server* → *Show all scores* menu for this purpose. All the results stored in the server will now be shown. If the correct results are shown, it is possible to read them manually using the *Server* → *Show tables* menu. Select all tables (hold down the Shift key and with the left mouse button down move the cursor over all the tables – to select all the tables) and then click on "Retrieve scores". The results of the selected tables are retrieved from the server and processed into the results file. The results can now be read by the scoring program.

Server data loss

If neither the server, nor the results file, nor the scoring program contains any data, your next resort is to retrieve the results from the individual Bridgemates. All results entered in each Bridgemate are stored in the internal memory of the Bridgemate – until the Bridgemate is used for a new game! The information can be read into the results file using the manual connection between the Bridgemates and your PC. Use the Bridgemate communication cable for this purpose. See Chapter 6 [Reading results manually in Bridgemate](#) for more information.

Warning

The board results are stored in the internal memory of the Bridgemate. Once the Bridgemate has been started up again for a new session, the memory is erased and all the data removed. This procedure is executed after you have pressed OK in the SECTION/TABLE screen and the Bridgemate has logged into the server. When retrieving the results from the Bridgemate, please ensure that no players are operating the Bridgemates so as to avoid the Bridgemate logging into the server and erasing all stored data.

Retrieving results from the log file

Results can also be retrieved from the log file. All results entered in BPC are stored in the log file. To view the log file, go to the *Tools* → *Show log file* menu. The selected rows can be copied and saved to an empty text file and printed. Automatic processing is not possible; the results must be entered manually in the scoring program. The actual file, *BMProLog.log*, is located in the Bridgemate Pro folder, normally *C:\Program Files\Bridgemate Pro*.

Special Note for Vista Users: Because of Vista's "security precautions," use the BPC option to specify a non-Program Files folder where the Log File should be saved. See [Settings](#) on Page 18, Chapter 3, for specific details.

Multiple bridge clubs playing simultaneously

There may be times when two or more bridge clubs are playing at the same time in one building. As the Bridgemate Pro server can incorporate a specific table number only once at a time, it is not possible for two clubs to make use of one server simultaneously. Both bridge clubs will therefore require their own server. It is of course vitally important that they do not interfere with each other. This problem can be rectified by getting the systems to communicate over different channels. The first club sets its system (server and Bridgemates) to channel 0, while the other uses channel 1. A third and fourth club can then use channel 2, 3, etc. This method enables multiple clubs to use the Bridgemate Pro scoring system in the same area simultaneously without causing any interference.

Note: Each club would be using their own client PC.

Large tournaments

During large tournaments, more than one server will be required to control over 128 tables. The layout of the tables is important in this respect. If the tables are outside the range of the server, an extra server will be needed to increase the range. The Bridgemate Pro scoring system supports multiple servers over a network. In principle, this network can support an unlimited number of tables. The following guidelines must be observed:

- You will need a fully operational network in which all used PCs are interconnected, enabling them to access and process files.
- Only one results file is used, containing all session data and board results of all tables.
- The scoring program is running on one of the computers in the network. It is not necessary for the scoring program to be running and/or the results file to be stored on one of the client computers that is running BPC. From an organizational point of view, it may be easier to use a separate PC containing the scoring program and results file. Client PCs access the results file over the network.
- Each Bridgemate server is connected to its own PC (=client) where BPC is running. Do not connect two servers to one client; although technically feasible, it may cause unnecessary confusion, as both servers are using the same client name. Worse still, it may even be counter-productive if both servers are operating over the same channel.
- Use different channels for each server, especially if the servers are within range of each other. Only use the same channels if you are sure that the servers are not interfering with each other (e.g., in different buildings).

Using ACBLscore and Bridgemates on a Network

ACBLscore and the Bridgemate Pro control system can be used on a network where the ACBLscore program and Bridgemate Pro Control (BPC) software both operate on a single computer. Each separate client computer will run its own BPC program and open the single results file, e.g., 070904E.bws, on the ACBLscore computer.

ACBLscore Computer

Configure the C:\ACBLSCOR\Gamefile folder for Network sharing and “change my files” by a remote computer. In BPC, using Server → Show Tables, highlight tables to be controlled on the remote computer(s) and click Delete Table(s).

Remote Computer(s)

Open BPC program and manually open the *.bws file on the ACBLscore computer.

Under “All Tables” – highlight tables to add to this client – right click and click Add to client

Under “Client Tables” – highlight tables to add to this client – right click and click Add to server

If the Bridgemates working into the Remote Computer(s) server(s) are configured for different channels, the BPC changes need only be made at the Remote Computer(s).

Contact Bridgemate.US for more detail.

Chapter 8: Using Bridgemates with ACBLScore

ACBLScore (Windows), starting with version 7.45, supports the Bridgemate Pro scoring system. This chapter describes how to use ACBLScore to activate BPC and retrieve information from the results file.

Installation

Software Required

- ACBLScore (Windows version) v7.59 or later – download from www.acbl.org
- Bridgemate Pro Control install program (BPCsetup-1-7-60.exe) – www.bridgemate.us/support.php or CD.

Install software

The BPC program controls communication with the Bridgemate Pro hardware and exchanging data with ACBLScore through the results file. The default installation folder is C:\Program Files\Bridgemate Pro. If BPC is installed in another folder, you will need to identify the “different” installation folder to ACBLScore.

- BPCsetup-1-7-60.exe installs the BPC software. It is recommended you accept the default installation folder.
Special Note for Vista Users: Because of Vista’s “security precautions,” use the BPC option to specify a non-Program Files folder where the Log File should be saved.
See [Settings](#) on Page 18, Chapter 3, for specific details
- Install ACBLScore Version 7.59 or later.
Special Notes for ACBLScore: When using Windows 98, Office 2000 must be installed on the PC. There are no special requirements for Windows ME or higher.

Note: Normally, BPC and ACBLScore will be installed on the same “client” PC.

Connect the Bridgemate Server to the Computer.

The server has a standard 9-pin, serial port connector. If your computer has a serial port, connect the server directly to that port. If there is no serial port, use the ATEN plug-and-play USB-to-serial (RS-232) converter to add a hardware serial port to client PC. Insert the converter in a free USB port. If the converter does not install automatically, see the converter’s instructions and driver CD for the installation.

Note: **The same USB port should always be used!** Do not use a USB hub. See [Special note when using the USB-to-serial converter](#) on Page 10, Chapter 2.

The Server requires electric power – supplied by an external power adapter, or 4 AA batteries.

- When the server is being used with the power adapter, the 4 batteries should be installed to provide “backup” power if there is an AC power interruption. This will preclude inadvertent loss of scoring data.
- When powered, the Server is active – waiting to receive radio signals from Bridgemates; thus, to conserve the batteries, one or more of the batteries should be removed when the server is not in use.

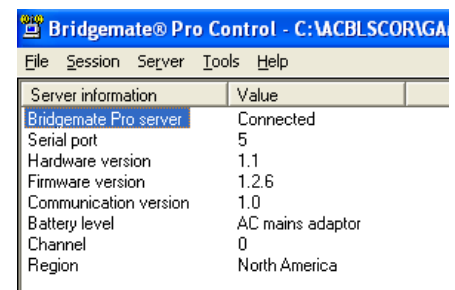

BPC Setup

Verify BPC/server connectivity

Once the server has been activated – by using batteries or the power adapter – start BPC to see if it finds the server. Normally, BPC is started by ACBLScore; but to verify server connectivity, it is recommended BPC be started directly from the Windows start menu at this time. [Go to Start - All programs → Bridgemate Pro → Bridgemate Pro.] A small text bar will display while it searches for the server.

The BPC screen will appear and the server details, displayed in the upper left “Server Information” section, should show “Connected.”

Verify that the region is set to North America.

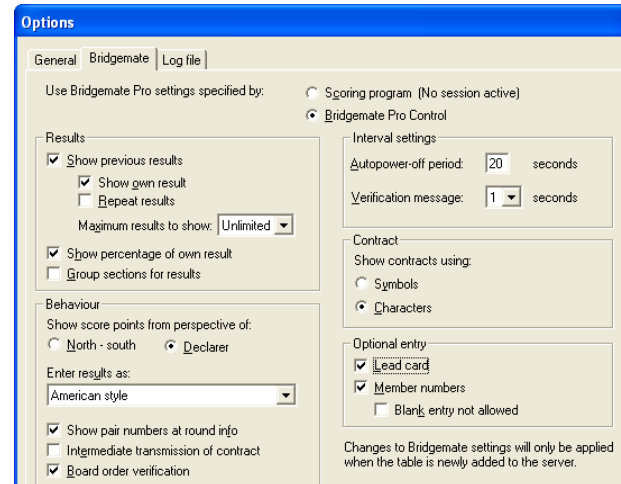

The screenshot shows the 'Bridgemate Pro Control' application window. The title bar reads 'Bridgemate Pro Control - C:\ACBLSCOR\GA'. The menu bar includes 'File', 'Session', 'Server', 'Tools', and 'Help'. Below the menu bar is a table with two columns: 'Server information' and 'Value'. The table contains the following data:

Server information	Value
Bridgemate Pro server	Connected
Serial port	5
Hardware version	1.1
Firmware version	1.2.6
Communication version	1.0
Battery level	AC mains adaptor
Channel	0
Region	North America

Set BPC options

- Go to menu Tools → Options
The General tab should show:

“Disable server detection”	Unchecked
“Show report when movement updated by external program”	Checked
“Results in Bridgemate Pro Control are displayed using notation:”	American Style
“Force data retrieval from server to be continuous activated...”	Checked
“Log files are saved in”	[Use on Vista PC's - see Settings on Page 18]
- On the “Bridgemate” tab – note the options for “Use Bridgemate Pro settings specified by”
 - When “Scoring program” is checked, options are set by ACBLscore.
 - When “Bridgemate Pro Control” is checked, the operation of the Bridgemates is set on this screen. See Chapter 6, page 29 – [Bridgemate Settings](#).
- The Bridgemate Scoring System is ready for use with ACBLscore.
- Close the BPC program.

Configure Bridgemates

- The TD (Tournament Director) Key is used to configure each Bridgemate.
- Each Bridgemate may be assigned to its own Section and Table: A1, A2, A3, B1, B2, etc. – or – Bridgemates may be configured for manual entry of the Section and Table by players at the table when a new game/session is started. See Chapter 5, page 22 – [Activating the Bridgemate](#).
- The default RF (radio frequency) channel is 0. If you experience transmission troubles with this channel, change to another channel between 0 and 127. The channel selected in BPC for the Server must always be the same as the one set in all the Bridgemates. The frequency range for North America is 902 ~ 927 mHz.

Note: Bridgemates automatically shut off power when not in use. Batteries need not be removed when not in use. When Bridgemates are activated and communicate with the server, a low-battery notice will be displayed when the battery life is at 25-30%. Typical life is 250~300 sessions, so – even with a low-battery notice – there is enough battery power for several more sessions.

When the Bridgemate batteries are “critically” low, there will be a brief “battery low” note on the screen and the Bridgemate will shut itself off. The batteries must be replaced before play can continue.

The Bridgemate Pro scoring system is now ready to be used with ACBLscore.

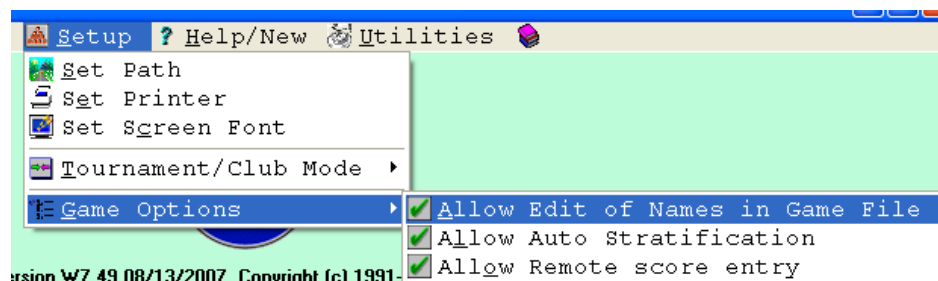

ACBLscore Setup

When the background screen is **green**, the program is in Club Mode and Game Options will be visible. If the screen is **pink** and/or Game Options is not visible, switch to Club Mode (from Tournament mode).

Enable Bridgemate functionality

Go to
Setup → Game Options

It is recommended that all 3 options be selected.

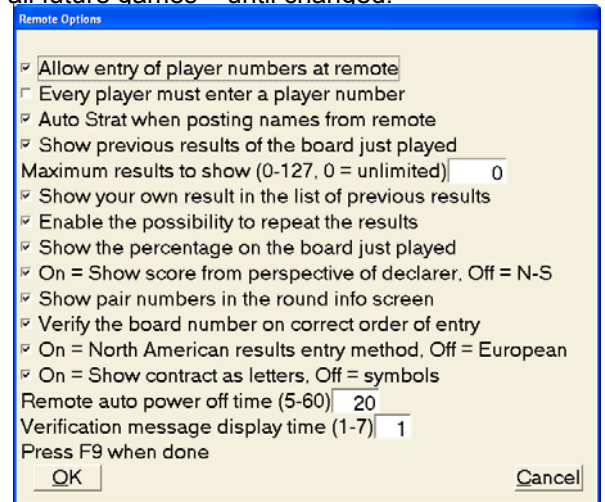

Set Bridgemate Options in

ACBLScore

It is recommended that Bridgemate options be configured in BPC for control by the scoring program – ACBLScore. Once the Bridgemate options have been set, they will be used for all future games – until changed.

When a game is first “opened,” press F11 to display the “Select Command” screen. Left click on “BMO Remote Options” or highlight and press ENTER.

Typical options are shown here.

Set up a Game

1. With the BPC program already installed, create the game file and set up sections in the normal manner.

Special considerations are:

Pick-ups must be: “Sequence by table number”

Click “Yes” or use cursor key to highlight “Yes” and press ENTER for “Use Remote Server for score entry”

2. ACBLScore automatically interrupts “posting” as of the penultimate (next-to-last) round to accommodate preparing a one-round-to-go report. After all results for the next-to-the-last round have been posted, one or more additional ACBLScore “post” commands will be needed to complete a game.
3. To set up a new game (especially with multiple sections) in ACBLScore more quickly, you may bypass event rating. See [Quick Setup Tip](#) on page 39.
4. When all Sections are set up, start BPC software.
The Bridgemate commands are at the “end/bottom” of the F11 commands; or, key “BMO” to go to the last entry – in order to see all the commands.
5. The **BMO** command is used to set Bridgemate options, when BPC software is configured to use options settings specified by the “Scoring Program.”
6. The **BMS** command is only used to start a new game/session. This will **RESET** the BPC software, server and Bridgemates – **erasing any existing settings**.
7. The **BMR** command is used to “restart” BPC without losing data already entered. This may happen when the PC has been stopped, e.g., due to a power failure, PC reboot, or any other reason for BPC being shut down during a session. There is no loss of data when **BMR** is used to restart the Bridgemate software.
8. Special note: If Bridgemate use was not enabled as shown in item 1 above, there will be a **BME** command visible. This should be used to “enable” the Bridgemate Pro scoring system for this game/section.

Read data from the Bridgemate Pro scoring system into ACBLscore.

- The ACBLscore screen is normally visible on the PC, and the BPC screen is minimized.
- When you first key F11 (or F9) the keyboard may appear to be inactive. Use the mouse (or touch pad) to move the cursor within the ACBLscore screen and left click. This will normally enable/activate the keyboard.

Player Numbers

- If Player Numbers are to be entered at each table, this will be done as each table starts to use a Bridgemate. After play has started, names are read from the results file into ACBLscore – using the BMN command.
Key F11 → B → M → N -or- F11 → End & highlight the BMN command line; Press ENTER
Special Note: In multi-section games the BMN command must be issued separately for each section.
- ACBL Life Members enter their alpha character as a number. J=1, K=2, L=3, M=4, N=5, O=6, P=7, Q=8 & R=9. A “Life Master ACBL Alpha = Number” file is on the www.bridgemate.us/user_guides.php website. Bridgemate.US attaches Life Master ACBL Alpha=Number labels to the bottom of each Bridgemate.
- Non ACBL member “pseudo” numbers: When there are regular players who are not ACBL members, each non-member may be assigned a pseudo number that may be used. Pseudo numbers are in the ACBLscore database preceded by the “#” character. For example: Player number 19 will be “#19” in the database.
- For each number that is found in the database, the player’s name will be entered into the Player Names (F3) file. If a number (ACBL member or pseudo) is not found – or no number has been entered – there will be no entry made in the file for that player.
- The **BMN** command will be available whenever ACBLscore’s Bridgemate Options is configured to “Allow entry of player numbers at remote.” ACBL member numbers as well as non-member “pseudo” numbers are read into ACBLscore and entered in the Names (F3) file. The **BMN** command must be executed separately for each Section in a session. If the ‘Auto Strat when posting names from remote’ option is checked, a strata will be assigned to each pair based on the players masterpoints in your ACBLscore database; otherwise all names (read in from Bridgemate) are entered in the Names file as strata “A” until the STRAT command is run. The F11 → STRAT command is used to assign the correct strata to each pair;
Note: Use the F3 command to manually enter the names of new players and those without a number. Use the up-arrow key to move into the player name field when there is only one player in a pair.
- Before or after the “auto stratify,” manually enter the names of players not shown in the Player Names file. With “Allow Auto Stratification” – see page 36 – you will be prompted to confirm the strata for each team.

Note: When using a Mitchell-Rover movement, there will be no opportunity for the “bump” team (that moves to different tables) to enter their player numbers. Use F3 to enter the names of the “bump team” players.

Board Results

- Once boards have been played and the results recorded on Bridgemates, the information may be “posted” into ACBLscore. Typically, this is done periodically throughout the game. This will also enable the scorer (usually the director) to spot any anomalies that might occur.
- The BMP command (F11 followed by B-M-P – or “End”) is to read board results from Bridgemate and post them into ACBLscore. Posting will automatically stop at the end of the penultimate round – to accommodate the preparation of a next-to-last round report. After the penultimate round has been posted, one or more additional “post” commands are needed to read all of the final results. **Ctrl-P is a shortcut for this command.**
- When posting results in a multi-section session you will see:
1 Post all sections configured for remote entry
2 Post only Section x

If you wish to post only scores for the “active” session,

- click on “2 Post only Section C” and click OK,
- press “2” and press Enter, or
- use the arrow keys to highlight the line and press ENTER.

Otherwise just press ENTER to post scores for all sections.

- The ACBLscore screen displays the number of rounds whose scores have all been posted. After all of the rounds being played are shown as “entered,” the section/game is over. Results and reports can be displayed and printed using F4, F5 and/or F8 as desired.
- Before a score has been accepted in a Bridgemate, the TD key can be used to separately assign an arbital score [AVG – (40%), AVG (50%) or AVG + (60%)] for E/W and for N/S.
- Scores already accepted/recorded in a Bridgemate – but not yet posted into ACBLscore – can be corrected using the TD Key. See *Erasing entry*, chapter 5, page 28. Insert the TD Key, press ‘3,’ OK to confirm “Erase result,” enter board number and press OK. The erroneous result is erased and the new may entered.

Bridgemate Score Correction

Section	Board	N-S Pair	E-W Pair	E-W OK

The correct Score should be:

Contract	By	Made/Down	N-S Score	E-W Score

A “Bridgemate Score Correction Form” is available on the www.bridgemate.us website. Many clubs use standard Table Tallies to report any corrections.

Typically – in ACBLscore – F10 is used to display a Board to enter correct scores.

To erase a score in ACBLscore – type “x”

Quick Setup Tips

1. **Early game/session setup:**

Single or multi-section games/sessions may be set up early in ACBLscore. Extraneous information such as expected movement, Event rating (stratification criteria), Event Information (Tournament data), etc., may be entered before the stress of actual play being started. It is suggested ACBLscore be “preset” with fewer tables than are actually expected in a single or multi-session game/session. Do not start BPC at this time.

> Then, when play is ready to start:

- a) Use F9→5 Change movement parameters and change to the actual movement/tables/etc.
- b) In a multi-section session, repeat the F9→5 Change movement parameters for each section.
- c) After the all the movement(s) have been finalized, use F11→BMS to start BPC – and the session.

2. To setup a session (with one or more sections) more quickly, bypass the masterpoint portion of normal setup. Just select “13 No masterpoints” when the “Select event rating” screen appears.

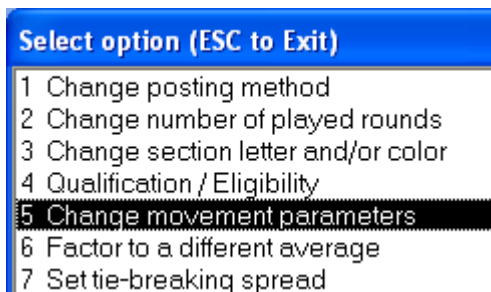

Later, after play has started, use “F9→10 Set masterpoint rating to create stratification for the game/sections.

Change Movement after Game has started

To the extent possible, each session/game should be as fully configured as possible in ACBLscore before starting BPC. Movement changes can be made in ACBLscore after the BPC program has been started – to accommodate the arrival of new player(s) or one-or-more “no show” players. The ACBLscore manual more fully describes how to make changes.

Key F9→5 Change movement parameters and ENTER (or ‘left’ mouse click). After the new parameters have been entered and accepted, ACBLscore will automatically invoke a command to update the results file and effect the changes in BPC.

Always post all scores before making any movement changes in ACBLscore. Especially if adding pairs or making special changes using EDMOV, post all scores using ‘F11→BMP’ or Ctrl-P – before making any changes.

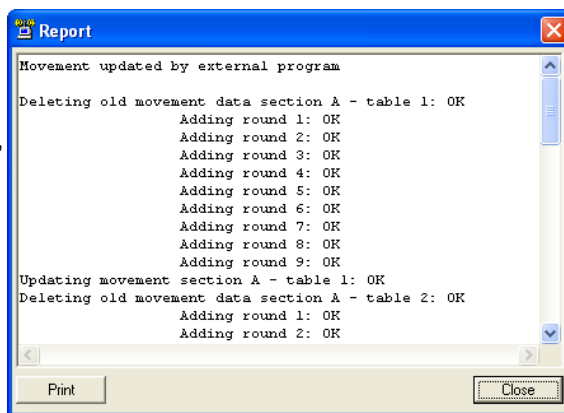

Note: When BPC is updated, there will normally be a “Report” screen displayed. This screen may “close” or BPC will automatically close it after 1 minute.

When ACBLscore updates BPC, “deleted” table(s) or section(s) may not actually be removed. Thus, it is recommended that any “deleted” table(s) and/or section(s) be manually deleted/logged off in BPC to preclude possible confusion if someone inadvertently activates a deleted-table or deleted-section Bridgемate.

Change before any Bridgemates have been used

When the changes can be made before players have started entering their member numbers and/or results, instruct players to delay any entries until the changes are made. After the ACBLscore changes have been made and BPC has been updated, players may begin normal Bridgемate use.

Change after people have started member number and/or score entry

- Ask players to hold up any further Bridgемate entries until the movement change has been completed.
- If the movement change will move pairs around, player numbers will need to be entered manually, later. However, if pairs remain at the same tables (even though they may now have different team numbers, e.g., when change from a 5 table Howell to a 6 table Howell, or a 6 table Howell to a 7 table Mitchell, ACBLscore **BMN** (Post Names from Bridgемate) will correctly assign pairs to the correct tables – when the “member-number” option is being used.
- Make the movement changes as noted above. ACBLscore automatically updates BPC with the new info. Note: When BPC is updated, there will normally be an “update” screen displayed. See above.

Replacing Bridgемate during play

If a Bridgемate appears to have stopped working, use the TD key and “reset” (0). The unit should “log off” and be ready to be returned to service. The alternative is to program a spare Bridgемate as a replacement.

- In BPC go to Server → Show Tables – highlight the table number involved (the Status indicator should be green) – click on “Log off table(s).”
- Use the TD key to program the replacement unit for the desired Section and Table.
- The reprogrammed Bridgемate should now be useable.
- If results had already been entered using the “old” Bridgемate, use Server → Read scores to see if the server has the results already entered – if so, no further action is needed. However, if some-or-all of the already entered results were deleted, use Session → Synchronize Client < - > Server → Recovery to update the server with the results already recorded in the results file.
- If the replacement Bridgемate displays SYSTEM NOT ACTIVATED YET screen, it may be necessary to “recover the server” as described above.

ACBLscore Tournament Setup

There is a special instruction sheet on how to configure ACBLscore to use the Bridgемate Pro scoring system at a tournament. This may be downloaded from www.bridgемate.us/user_guides.php.

Swiss Teams and Knockouts

ACBLscore does not support using the Bridgемate Pro wireless scoring system for team events. These sessions will be scored manually in ACBLscore.

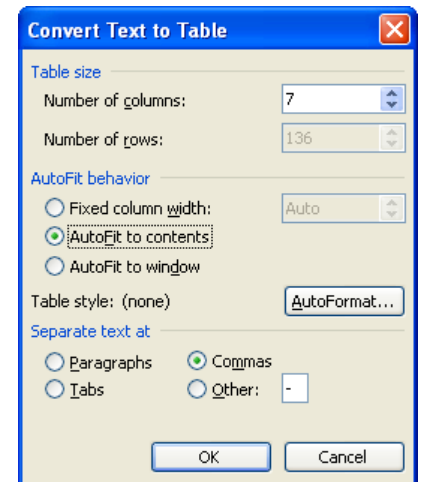

Procedures when using Player entry of Section/Table

1. Clear the server so it does not have any stored session info. If the game is just being started and the server has been without battery and AC power, the server will be cleared - otherwise,
 - Open BPC, select Server --> Reset. On the caution screen – enter the displayed number and press Enter or click OK - or,
 - Remove the power connector and 1-or-more battery(ies). Reinstall the battery(ies) and power connector.
2. **Check each Bridgemate as it is placed on a table.** Press the OK key; if the "Bridgemate Pro" screen appears, the unit is ready for Section/Table input. If, however, the display is anything other than "Bridgemate Pro," reset the Bridgemate.

Special Reports

Play data may be copied from BPC and used to prepare special reports – such as a summary of the results of each board played.

- See [Creating Reports](#), Chapter 3, page 14 on how to copy play data from the BPC screen.
- EXCEL spreadsheet:
 - Paste the copied data into an Excel Spreadsheet.
 - With the new data highlighted, select Data → Text to Columns. Select “Comma” as the delimiter.
- WORD document:
 - Paste the copied data into a Word document.
 - Highlight the new data, select Table → Convert → Text to Table. Complete the “Convert Text to Table” screen as noted for “Commas,” “AutoFit to contents” and number of columns in your data (7 is shown here).
 - The table that is created will be highlighted. Select Table → Convert → Table to Text. This creates text which may be pasted into an email message or uploaded to a website.
- OpenOffice.org: A simpler procedure is to use the spreadsheet program of OpenOffice.org which is “free to download, use, and distribute” at <http://download.openoffice.org/>
 - Paste the copied data into the OpenOffice.org calc spreadsheet. On the “Text Import” screen that will display, check Comma under “Separator options” and click OK.
 - Adjust column widths – if desired.
 - Highlight and copy the data for your report. This data may be pasted into an email message or uploaded to a website.

It is suggested the BPC column heading “NS/EW” be changed to Declarer. Below is a sample report.

Note: This example includes the “Lead” card. Since this option is not available through ACBLscore, please contact Bridgemate.US for information on how to use the Bridgemate Lead-card feature with ACBLscore.

Section	Board	NS	EW	Declarer	Contract	Result	Lead
A	1	2	3	N	4 H	-2	H4
A	1	3	5	N	4 H	-2	H4
A	1	4	7	S	3 NT	-1	SJ
A	1	5	9	N	3 H	-1	H4
A	1	6	2	S	3 NT	-3	DA
A	1	7	4	N	4 H	-1	C2

Declaration of Conformity

Federal Communication Commission Declaration of Conformity (DoC) Statement

Responsible party: Bridge Systems BV
Address: Postbus 21570, 3001 AN, Rotterdam, The Netherlands

Hereby declares that the product:

Product Name: Bridgemate® Pro Wireless Scoring System
Table Terminal: Model No: BM11R11B FCC ID: UVIBM11R11B
Server: Model No: BS10R11B FCC ID: UVIBS10R11B

Conforms to the following regulations: FCC part 15, subpart B, section 15.47

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.

Caution:

Any changes or modifications not expressly approved by Bridge Systems BV could void the user's authority to operate the equipment.

Canada Regulatory Compliance Statement

This device complies with Industry Canada Standard RSS-210. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Ce dispositif est conforme avec la norme CNR-210 d'Industrie Canada. Le fonctionnement du dispositif est sujet aux deux conditions suivantes: (1) le dispositif ne doit pas causer de brouillage, et (2) le dispositif doit accepter tous brouillages, incluant tous brouillages.

Table Terminal: IC: 6946A-BM11R11B
Server: IC: 6946A-BS10R11B
